Daniel Wiener, Administrator of Inclusive Assessment (retired), Massachusetts Department of Elementary and Secondary Education

Introduction and Purpose

The Fall 2023 edition of the *Alternate Academic Achievement Standards for the Massachusetts Curriculum Frameworks in Science and Technology/Engineering* (Resource Guide) incorporates the curriculum content standards in the *2016 Science and Technology/Engineering (STE) Curriculum Framework*. The Resource Guides align achievement of grade-level standards with the requirements of the state's alternate assessment based on alternate academic achievement standards. The Resource Guide is intended to be used for students participating in the alternate assessment.

The Resource Guides are assessment guides for teachers who work with students with the most significant cognitive disabilities who are eligible to participate in the MCAS Alternate Assessment (MCAS-Alt).

The Resource Guide identifies standard-based outcomes called **entry points** for each science practice to assist educators in teaching and assessing appropriately challenging standards-based skills and content that are aligned with grade-level standards, as required by law. Entry points also provide a roadmap for students to make steady progress toward standards at grade-level complexity.

In cases where students are unable to address entry points even at the lowest levels of complexity, due to the severity of their disability, teachers will use access skills that address early developmental communication and motor skills practiced during age-appropriate, standard-based activities. Entry points and access skills are listed for each standard in this Resource Guide.

Resource Guides in English Language Arts (ELA), Mathematics, and Science and Technology/Engineering (STE) are available online at www.doe.mass.edu/mcas/alt/resources.html.

How Resource Guides Were Developed

The Department convened panels of experts in each content area, including content specialists, assessment experts, special educators familiar with students with the most significant cognitive disabilities, higher education faculty, parents and advocates, and members of the state's contractor team (see Acknowledgements on previous page). The panel reviewed the standards, unpacked the information, and identified the essence of the standard. Once panelists agreed upon the essence of the standard, entry points that aligned with specific practices were created based on the standard and placed on a continuum from the least to the most complex. Teachers choose an entry point that assesses a challenging and attainable skill appropriate for each student.

How to Use the Resource Guide

Figure 1 illustrates how to select entry points and access skills for the MCAS-Alt Additional information on how to document student performance and progress throughout the school year can be found in the *Educator's Manual for MCAS-Alt*.

Organization of the Pre-Kindergarten through High School STE Resource Guide

The Resource Guide is organized by discipline:

Grades 5 and 8 STE Disciplines:

- *Earth and Space Science*
- *Life Science*
- *Physical Science (Chemistry and Physics)*
- *Technology/Engineering*

High School STE Disciplines:

- *Biology*
- *Introductory Physics*

Science Practices

The STE curriculum framework incorporates the use of eight **science practices** that promote student engagement in scientific inquiry and engineering design skills. The **entry points and access skills are incorporated within each science practice**.

The eight **science practices** in the 2016 STE Curriculum Framework:

Asking (Scientific) Questions and Defining Problems

Planning and Carrying Out Investigations* (to gather data and perform experiments to answer a scientific question)

Using Mathematical and Computational Thinking (to answer scientific questions)

Analyzing and Interpreting Data (to recognize patterns and analyze and organize data)

Developing and Using Models* (to think about and make sense of an experience and make predictions, using 2-D and 3-D representations, constructions, displays, illustrations, and simulations)

Constructing Explanations and Designing Solutions (to explain phenomena and use evidence to support explanations)

Engaging in Argument from Evidence (to support a claim and critique competing arguments)

Obtaining, Evaluating, and Communicating Information (to research, record, evaluate, and present information from scientific texts and digital sources)

Figure 1
How to Select Entry Points and Access Skills for the MCAS-Alt

Steps 1, 2 and 3

- *Conduct the MCAS-Alt Skills Survey for each science practice (8)*
- *Determine the grade and discipline to be assessed.*
- *Review STE high-quality curriculum units.*

Steps 4 and 5

- *Select a Core Idea from **three different disciplines** in **grades 5 – 8***
- *Select Three Core Ideas from **one discipline** in **grade 9 or 10**.*

Step 6

Within each core idea, select entry points that address different practices in the highest-grade span that the student can perform.

Step 7, if needed

In cases where the MCAS-Alt Skills Survey indicates that the student cannot complete any of the skills even at the lowest level of complexity, the student should address access skills during standards-based activities in the domain.

Definitions of Terms Used in this Resource Guide

- **Access Skills** are developmental (communication or motor) skills identified as instructional outcomes in the content area being assessed. Access skills should be addressed during standards-based science activities and are listed separately based on the core of each discipline.
- **Core Ideas** are topics that consist of clusters of standards in a related area of a science and technology/engineering discipline, such as Earth's Systems in Earth and Space Science.
- **Disciplines** a particular branch of scientific knowledge, such as Life Science.
- **Entry Points** are academic outcomes below grade-level expectations that are aligned with each grade-level standard and core idea. Entry points are intended for use by educators to instruct students with disabilities who are performing below grade-level expectations.
- **Investigation** is a process by which a variety of methods and tools are used to make observations and measurements that result in the recording of data to answer a scientific phenomenon. For example, the student can engage in exploratory activities in which they identify questions gather information and investigate the question, and produce a response, inference, conclusion, or findings.
- **Model** is a representation or illustration that describes the features of a system, object, process, pattern, or relationship, with varying degrees of detail and accuracy depending on the purpose for which the model is being used. These may include drawings, sketches, diagrams, flow charts, physical constructions in 2- or 3-dimensions, computer simulations, and demonstrations.
- **Science Practices** define a set of skills that promote student engagement in scientific inquiry and engineering design in learning about the content of each discipline. The practices intentionally overlap, interconnect, and integrate with the content contained in the core idea being assessed.
- **Standards** define what all students should understand and be able to do in a content area in each grade span. Each standard in the Resource Guide is listed precisely as it appears in the *2016 Massachusetts Science and Technology/Engineering Curriculum Framework*.

Asterisks (*) designate standards that have an engineering design application.

Science and Technology/Engineering Pre-K–Grade 8

EARTH AND SPACE SCIENCES

Core Idea	Access Skills	Grades Pre-K–2	Grades 3–5	Grades 6–8
Earth’s Place in the Universe	Pages 13–15	Pages 9, 11, 20–21	Pages 27–30	Pages 35, 37, 39–40
Earth’s Systems	Pages 15–17	Pages 9–10, 12, 21–23	Pages 26–28, 30–32	Pages 35–37, 41–43
Earth and Human Activity	Pages 17–19	Pages 9–10, 23–25	Pages 26–28, 32–34	Pages 36, 38, 43–45

Grade Level: Pre-Kindergarten

Core Idea	Learning Standards as written	
Earth's Place in the Universe	PreK-ESS1-1(MA)	Demonstrate awareness that the Moon can be seen in the daytime and at night, and of the different apparent shapes of the Moon over a month. Clarification Statement: ♦ The names of moon phases or sequencing of moon phases is not expected.
	PreK-ESS1-2(MA)	Observe and use evidence to describe that the Sun is in different places in the sky during the day.
Earth's Systems	PreK-ESS2-1(MA)	Raise questions and engage in discussions about how different types of local environments (including water) provide homes for different kinds of living things.
	PreK-ESS2-2(MA)	Observe and classify non-living materials, natural and human made, in the local environment.
	PreK-ESS2-3(MA)	Explore and describe different places water is found in the local environment.
	PreK-ESS2-4(MA)	Use simple instruments to collect and record data on elements of daily weather, including sun or clouds, wind, snow or rain, and higher or lower temperature.
	PreK-ESS2-5(MA)	Describe how local weather changes from day to day and over the seasons and recognize patterns in those changes. ♦ Clarification Statement: ♦ Descriptions of the weather can include sunny, cloudy, rainy, warm, windy, and snowy.
	PreK-ESS2-6(MA)	Provide examples of the impact of weather on living things. Clarification Statement: ♦ Make connections between the weather and what they wear and can do and the weather and the needs of plants and animals for water and shelter.
Earth and Human Activity	PreK-ESS3-1(MA)	Engage in discussion and raise questions using examples about local resources (including soil and water) humans use to meet their needs.
	PreK-ESS3-2(MA)	Observe and discuss the impact of people's activities on the local environment.

Grade Level: Kindergarten

Core Idea	Learning Standards as written	
Earth's Systems	K-ESS2-1	Use and share quantitative observations of local weather conditions to describe patterns over time. Clarification Statements: <ul style="list-style-type: none">◆ Examples of quantitative observations could include numbers of sunny, windy, and rainy days in a month, and relative temperature.◆ Quantitative observations should be limited to whole numbers.
	K-ESS2-2	Construct an argument supported by evidence for how plants and animals (including humans) can change the environment. Clarification Statement: <ul style="list-style-type: none">◆ Examples of plants and animals changing their environment could include a squirrel digging holes in the ground and tree roots that break concrete.
Earth and Human Activity	K-ESS3-2	Obtain and use information about weather forecasting to prepare for, and respond to, different types of local weather.
	K-ESS3-3	Communicate solutions to reduce the amount of natural resources an individual uses. * Clarification Statement: <ul style="list-style-type: none">◆ Examples of solutions could include reusing paper to reduce the number of trees cut down and recycling cans and bottles to reduce the amount of plastic or metal used.

Asterisks () designate standards that have an engineering design application*

CONTENT Science and Technology/Engineering

DISCIPLINE Earth and Space Sciences

Grade Level: Grade 1

Core Idea	Learning Standards as written	
Earth's Place in the Universe	1-ESS1-1	Use observations of the Sun, Moon, and stars to describe that each appears to rise in one part of the sky, appears to move across the sky, and appears to set.
	1-ESS1-2	Analyze provided data to identify relationships among seasonal patterns of change, including relative sunrise and sunset time changes, seasonal temperature and rainfall or snowfall patterns, and seasonal changes to the environment. Clarification Statement: <ul style="list-style-type: none">◆ Examples of seasonal changes to the environment can include foliage changes, bird migration, and differences in amount of insect activity.

Grade Level: Grade 2

Core Idea	Learning Standards as written	
Earth's Systems	2-ESS2-1	Investigate and compare the effectiveness of multiple solutions designed to slow or prevent wind or water from changing the shape of the land.* Clarification Statements: <ul style="list-style-type: none">◆ Solutions to be compared could include different designs of dikes and windbreaks to hold back wind and water, and different designs for using shrubs, grass, and trees to hold back the land.◆ Solutions can be generated or provided.
	2-ESS2-2	Map the shapes and types of landforms and bodies of water in an area. Clarification Statements: <ul style="list-style-type: none">◆ Examples of types of landforms can include hills, valleys, river banks, and dunes.◆ Examples of water bodies can include streams, ponds, bays, and rivers.◆ Quantitative scaling in models or contour mapping is not expected.
	2-ESS2-3	Use examples obtained from informational sources to explain that water is found in the ocean, rivers and streams, lakes and ponds, and may be solid or liquid.
	2-ESS2-4(MA)	Observe how blowing wind and flowing water can move Earth materials from one place to another and change the shape of a landform. Clarification Statements: <ul style="list-style-type: none">◆ Examples of types of landforms can include hills, valleys, river banks, and dunes.

ACCESS SKILLS to Earth and Space Sciences Standards

CORE IDEA	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Earth's Place in the Universe	<p>1. Asking questions/defining problems</p> <ul style="list-style-type: none"> Explore materials representing the Earth, Moon, Sun, stars, solar system, or seasons visually or tactilely (Specify accuracy criteria) Sustain exploration activity (e.g., vocalize when activity is interrupted) with materials representing the Earth, Moon, Sun, stars, solar system, or seasons within a specified amount of time of the activity being interrupted Gain attention within a specified time block(s) to explore materials representing the Earth, Moon, Sun, stars, solar system, or seasons Make a request to explore materials representing the Earth, Moon, Sun, stars, solar system, or seasons within specified blocks of time Choose within a specified amount of time from an errorless array of materials related to the Earth, Moon, Sun, stars, solar system, or seasons Match object to object, or picture to picture of materials in an Earth, Moon, Sun, stars, solar system, or seasons activity <p>2. Planning and carrying out investigations</p> <ul style="list-style-type: none"> Grasp (hold) materials in an investigation about the Earth, Moon, Sun, stars, solar system, or seasons for a specified amount of time 	<p>3. Analyzing and interpreting data</p> <ul style="list-style-type: none"> Grasp (hold) materials related to an Earth, Moon, Sun, stars, solar system, or seasons activity for a specified amount of time in a comparison activity Release or give materials related to an Earth, Moon, Sun, stars, solar system, or seasons activity within a specified amount of time in a comparison activity Turn on/off technology related to an Earth, Moon, Sun, stars, solar system, or seasons activity within a specified amount of time in a comparison activity Move materials related to an Earth, Moon, Sun, stars, solar system, or seasons activity in a comparison activity Use two hands to manipulate materials related to an Earth, Moon, Sun, stars, solar system, or seasons activity in a comparison activity Imitate action related to an Earth, Moon, Sun, stars, solar system, or seasons activity in a comparison activity Initiate cause and effect response related to an Earth, Moon, Sun, stars, solar system, or seasons activity within a specified time block(s) in a comparison activity 	<p>5. Developing and using models</p> <ul style="list-style-type: none"> Track a model (shift focus from materials to speaker) in an Earth, Moon, Sun, stars, solar system, or seasons activity Orient or manipulate materials or a model in an Earth, Moon, Sun, stars, solar system, or seasons activity Functionally use materials or a model related to the Earth, Moon, Sun, stars, solar system, or seasons activity Locate objects partially hidden or out of sight in an Earth, Moon, Sun, stars, solar system, or seasons activity Construct or assemble a model to represent the Earth, Moon, Sun, stars, solar system, or seasons Use one object to act on another in a model representing the Earth, Moon, Sun, stars, solar system, or seasons (e.g., use a pointer to tap a globe) <p>6. Constructing explanations</p> <ul style="list-style-type: none"> Move materials related to the creation of a written product that describes the characteristics of seasonal changes in the environment Choose from an array of errorless choices (within a specified amount of time) related to the creation of a written product that describes how the position of the Sun and Earth results in day and night

Grade Level: Grade 3

Core Idea	Learning Standards as written	
Earth's Systems	3-ESS2-1	Use graphs and tables of local weather data to describe and predict typical weather during a particular season in an area. Clarification Statements: <ul style="list-style-type: none">◆ Examples of weather data could include temperature, amount and type of precipitation (e.g., rain, snow), wind direction, and wind speed.◆ Graphical displays should focus on pictographs and bar graphs.
	3-ESS2-2	Obtain and summarize information about the climate of different regions of the world to illustrate that typical weather conditions over a year vary by region. Clarification Statement: <ul style="list-style-type: none">◆ Examples of information can include climate data (average temperature, average precipitation, average wind speed) or comparative descriptions of seasonal weather for different regions.
Earth and Human Activity	3-ESS3-1	Evaluate the merit of a design solution that reduces the damage caused by weather. * Clarification Statement: <ul style="list-style-type: none">◆ Examples of design solutions to reduce weather-related damage could include a barrier to prevent flooding, a wind-resistant roof, and a lightning rod.

Grade Level: Grade 4

Core Idea	Learning Standards as written	
Earth's Place in the Universe	4-ESS1-1	Use evidence from a given landscape that includes simple landforms and rock layers to support a claim about the role of erosion or deposition in the formation of the landscape over long periods of time. Clarification Statements: <ul style="list-style-type: none">◆ Examples of evidence and claims could include rock layers with shell fossils above rock layers with plant fossils and no shells, indicating a change from deposition on land to deposition in water over time; and a canyon with rock layers in the walls and a river in the bottom, indicating that a river eroded the rock over time.◆ Examples of simple landforms can include valleys, hills, mountains, plains, and canyons.◆ Focus should be on relative time.
	4-ESS2-1	Make observations and collect data to provide evidence that rocks, soils, and sediments are broken into smaller pieces through mechanical weathering and moved around through erosion. Clarification Statements: <ul style="list-style-type: none">◆ Mechanical weathering processes can include frost wedging, abrasion, and tree root wedging.◆ Erosion can include movement by blowing wind, flowing water, and moving ice.
Earth and Human Activity	4-ESS2-2	Analyze and interpret maps of Earth's mountain ranges, deep ocean trenches, volcanoes, and earthquake epicenters to describe patterns of these features and their locations relative to boundaries between continents and oceans.
	4-ESS3-1	Obtain information to describe that energy and fuels humans use are derived from natural resources and that some energy and fuel sources are renewable and some are not. Clarification Statements: <ul style="list-style-type: none">◆ Examples of renewable energy resources could include wind energy, water behind dams, tides, and sunlight.◆ Non-renewable energy resources are fossil fuels and nuclear materials.
	4-ESS3-2	Evaluate different solutions to reduce the impacts of a natural event such as an earthquake, blizzard, or flood on humans.* Clarification Statement: <ul style="list-style-type: none">◆ Examples of solutions could include an earthquake-resistant building or a constructed wetland to mitigate flooding.

Grade Level: Grade 5

Core Idea	Learning Standards as written	
Earth's Place in the Universe	5-ESS1-1	Use observations, first-hand and from various media, to argue that the Sun is a star that appears larger and brighter than other stars because it is closer to Earth.
	5-ESS1-2	Use a model to communicate Earth's relationship to the Sun, Moon, and other stars that explain (a) why people on Earth experience day and night, (b) patterns in daily changes in length and direction of shadows over a day, and (c) changes in the apparent position of the Sun, Moon, and stars at different times during a day, over a month, and over a year. Clarification Statement: <ul style="list-style-type: none">♦ Models should illustrate that the Earth, Sun, and Moon are spheres; include orbits of the Earth around the Sun and of the Moon around Earth; and demonstrate Earth's rotation about its axis.
Earth's Systems	5-ESS2-1	Use a model to describe the cycling of water through a watershed through evaporation, precipitation, absorption, surface runoff, and condensation.
	5-ESS2-2	Describe and graph the relative amounts of salt water in the ocean; fresh water in lakes, rivers, and groundwater; and fresh water frozen in glaciers and polar ice caps to provide evidence about the availability of fresh water in Earth's biosphere.
Earth and Human Activity	5-ESS3-1	Obtain and combine information about ways communities reduce human impact on the Earth's resources and environment by changing an agricultural, industrial, or community practice or process. Clarification Statement: <ul style="list-style-type: none">♦ Examples of changed practices or processes include treating sewage, reducing the amounts of materials used, capturing polluting emissions from factories or power plants, and preventing runoff from agricultural activities.
	5-ESS3-2(MA)	Test a simple system designed to filter particulates out of water and propose one change to the design to improve it.*

ENTRY POINTS to Earth and Space Sciences Standards in Grades 3–5

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Earth's Place in the Universe	<p>1. Asking questions/defining problems</p> <ul style="list-style-type: none"> ◆ Use observations and/or data to ask relevant questions about fossils or rock layers ◆ Use observations and/or data to ask relevant questions about landforms and how they were created ◆ Use observations and/or data to ask relevant questions about why people on Earth experience day and night ◆ Identify questions that can be answered by an investigation about the impact of the relative positions of the Earth, Moon, and Sun ◆ Identify questions that can be answered by an investigation about the pattern of how shadows change over the course of a day ◆ Use observations and/or data to ask relevant questions about weathering and erosion ◆ Identify questions that can be answered by an investigation about weathering and erosion ◆ Generate scientific questions about weathering and erosion <p>2. Planning and carrying out investigations</p> <ul style="list-style-type: none"> ◆ Plan and/or follow the steps of an investigation to collect data and/or observations about how erosion and deposition change the Earth's surface features over long periods of time ◆ Plan and/or follow the steps of an investigation to collect data and/or observations about how the Sun's apparent position in the sky affects the length and direction of shadows 	<p>3. Obtaining, evaluating, and communicating information <ul style="list-style-type: none"> Communicate scientific information (orally, graphically, textually, and/or mathematically) about the climate of different regions of the world (e.g., typical weather conditions) Research and present information from an investigation about the water cycle Research and present information from an investigation about the changes in the Earth's surface due to erosion and/or weathering Research and present information about the features (e.g., mountain ranges, deep ocean trenches, volcanoes, earthquake epicenters) to describe the patterns between continents and oceans Communicate scientific information (orally, graphically, textually and/or mathematically) about the water cycle
Earth and Human Activity	1. Asking questions/defining problems <ul style="list-style-type: none"> Use observations and/or data to ask relevant questions about impact of human activities on the environment Use observations and/or data to ask relevant questions about renewable versus non-renewable energy Identify questions that can be answered by an investigation about how pollution or runoff is caused by human impact Define a simple problem that can be solved related to filtering water 	3. Analyzing and interpreting data <ul style="list-style-type: none"> Compare predictions to the data and/or observations from an investigation related to filtering particles from water Use data and/or observations to identify relationships between the impact of human activities and the environment (e.g., pollution, runoff) 	5. Developing and using models <ul style="list-style-type: none"> Compare models of solutions that mitigate damage caused by weather Compare models of solutions that mitigate damage caused by natural events Compare models of renewable and non-renewable energy sources to identify common features and differences. Illustrate or develop a model to show/explain the impact of human activities and the environment (e.g., pollution, runoff)

ENTRY POINTS to Earth and Space Sciences Standards in Grades 3–5

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Earth and Human Activity (cont.)	<p>1. Asking questions/defining problems (cont.)</p> <ul style="list-style-type: none"> Define a simple problem that can be solved related to the impact of natural events (e.g., hurricanes, fire, blizzards, floods) on humans Define a simple problem that can be solved related to the impact of damage caused by weather (e.g., windbreak, lightning rod, landscaping features such as rock walls, wetlands) on humans <p>2. Planning and carrying out investigations</p> <ul style="list-style-type: none"> Plan and/or follow the steps of an investigation to collect data and/or observations about different designs for filtering particles out of water (e.g., coffee filter, charcoal, sand, screen) Record observations (e.g., firsthand experiences, media) to collect data related to damage caused by natural events Record observations (e.g., firsthand experiences, media) to collect data related to damage caused by weather Record observations (e.g., firsthand experiences, media) to collect data related to how communities can reduce the human impact on Earth's resources and environment Record observations (e.g., firsthand experiences, media) to collect data related to the energy and fuel sources that are renewable and non-renewable 	<p>3. Analyzing and interpreting data (cont.)</p> <ul style="list-style-type: none"> Display data using a simple graph to show how humans use different forms of renewable and non-renewable energy sources Draw conclusions based on evidence (e.g., from an investigation) about damage caused by weather Draw conclusions based on evidence (e.g., from an investigation) about damage caused by natural events <p>4. Using mathematics and computational thinking</p> <ul style="list-style-type: none"> Use counting and numbers to show data about the effectiveness of a water filter Organize the qualitative and quantitative information about damage caused by weather Organize the qualitative and quantitative information about damage caused by natural events 	<p>5. Developing and using models (cont.)</p> <ul style="list-style-type: none"> Illustrate or develop a model to show/explain the best solution for filtering particles out of water <p>6. Constructing explanations</p> <ul style="list-style-type: none"> Use tools and/or materials to build a device that solves a specific problem about filtering particles out of water Draw and/or explain a design solution that reduces the damage caused by weather Draw and/or explain a design solution that reduces the impact of a natural event Describe different sources of renewable and non-renewable energy Describe how agricultural and industrial pollution impact the environment <p>7. Engaging in argument from evidence</p> <ul style="list-style-type: none"> Use scientific evidence in support of a claim about how different sources of energy impact the environment Use scientific evidence in support of a claim about how runoff from agricultural activities impacts the environment Use scientific evidence to support a claim for or against a design solution about the effectiveness of a water filter Use scientific evidence to support a claim for or against a design solution to prevent damage from natural events

ENTRY POINTS to Earth and Space Sciences Standards in Grades 3–5

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Earth and Human Activity (cont.)			<p>8. Obtaining, evaluating, and communicating information</p> <ul style="list-style-type: none"> ◆ Compare two informational sources to determine similarities and differences in how they present information about how pollution and runoff (e.g., agricultural activities) impacts the environment ◆ Communicate scientific information or ideas (orally, graphically, textually, and/or mathematically) about different solutions that filter particles out of water ◆ Research and present information about solutions to prevent damage caused by natural events ◆ Research and present information about solutions to prevent damage caused by weather ◆ Research and present information about renewable and non-renewable energy sources

Grade Level: Grade 6

Core Idea	Learning Standards as written	
Earth's Place in the Universe	6.MS-ESS1-1a	Develop and use a model of the Earth-Sun-Moon system to explain the causes of lunar phases and eclipses of the Sun and Moon. Clarification Statement: <ul style="list-style-type: none">◆ Examples of models can be physical, graphical, or conceptual and should emphasize relative positions and distances.
	6.MS-ESS1-4	Analyze and interpret rock layers and index fossils to determine the relative ages of rock formations that result from processes occurring over long periods of time. Clarification Statements: <ul style="list-style-type: none">◆ Analysis includes laws of superposition and crosscutting relationships limited to minor displacement faults that offset layers.◆ Processes that occur over long periods of time include changes in rock types through weathering, erosion, heat, and pressure.
	6.MS-ESS1-5(MA)	Use graphical displays to illustrate that Earth and its solar system are one of many in the Milky Way galaxy, which is one of billions of galaxies in the universe. Clarification Statement: <ul style="list-style-type: none">◆ Graphical displays can include maps, charts, graphs, and data tables.
Earth's Systems	6.MS-ESS2-3	Analyze and interpret maps showing the distribution of fossils and rocks, continental shapes, and seafloor structures to provide evidence that Earth's plates have moved great distances, collided, and spread apart. Clarification Statement: <ul style="list-style-type: none">◆ Maps may show similarities of rock and fossil types on different continents, the shapes of the continents (including continental shelves), and the locations of ocean structures (such as ridges, fracture zones, and trenches), similar to Wegener's visuals.

Grade Level: Grade 7

Core Idea	Learning Standards as written	
Earth's Systems	7.MS-ESS2-2	Construct an explanation based on evidence for how Earth's surface has changed over scales that range from local to global in size. Clarification Statements: <ul style="list-style-type: none">◆ Examples of processes occurring over large, global spatial scales include plate motion, formation of mountains and ocean basins, and ice ages.◆ Examples of changes occurring over small, local spatial scales include earthquakes and seasonal weathering and erosion.
	7.MS-ESS2-4	Develop a model to explain how the energy of the Sun and Earth's gravity drive the cycling of water, including changes of state, as it moves through multiple pathways in Earth's hydrosphere. Clarification Statement: <ul style="list-style-type: none">◆ Examples of models can be conceptual or physical.
Earth and Human Activity	7.MS-ESS3-2	Obtain and communicate information on how data from past geologic events are analyzed for patterns and used to forecast the location and likelihood of future catastrophic events. Clarification Statements: <ul style="list-style-type: none">◆ Geologic events include earthquakes, volcanic eruptions, floods, and landslides.◆ Examples of data typically analyzed can include the locations, magnitudes, and frequencies of the natural hazards.
	7.MS-ESS3-4	Construct an argument supported by evidence that human activities and technologies can mitigate the impact of increases in human population and per capita consumption of natural resources on the environment. Clarification Statements: <ul style="list-style-type: none">◆ Arguments should be based on examining historical data such as population graphs, natural resource distribution maps, and water quality studies over time.◆ Examples of negative impacts can include changes to the amount and quality of natural resources such as water, mineral, and energy supplies.

Grade Level: Grade 8

Core Idea	Learning Standards as written	
Earth's Place in the Universe	8.MS-ESS1-1b	Develop and use a model of the Earth-Sun system to explain the cyclical pattern of seasons, which includes Earth's tilt and differential intensity of sunlight on different areas of Earth across the year. Clarification Statement: <ul style="list-style-type: none">◆ Examples of models can be physical or graphical.
	8.MS-ESS1-2	Explain the role of gravity in ocean tides, the orbital motions of planets, their moons, and asteroids in the solar system.
Earth's Systems	8.MS-ESS2-1	Use a model to illustrate that energy from Earth's interior drives convection that cycles Earth's crust, leading to melting, crystallization, weathering, and deformation of large rock formations, including generation of ocean sea floor at ridges, submergence of ocean sea floor at trenches, mountain building, and active volcanic chains. Clarification Statement: <ul style="list-style-type: none">◆ The emphasis is on large-scale cycling resulting from plate tectonics
	8.MS-ESS2-5	Interpret basic weather data to identify patterns in air mass interactions and the relationship of those patterns to local weather. Clarification Statements: <ul style="list-style-type: none">◆ Data includes temperature, pressure, humidity, precipitation, and wind.◆ Examples of patterns can include air masses flow from regions of high pressure to low pressure, and how sudden changes in weather can result when different air masses collide.◆ Data can be provided to students (such as in weather maps, data tables, diagrams, or visualizations) or obtained through field observations or laboratory experiments.
	8.MS-ESS2-6	Describe how interactions involving the ocean affect weather and climate on a regional scale, including the influence of the ocean temperature as mediated by energy input from the Sun and energy loss due to evaporation or redistribution via ocean currents. Clarification Statement: <ul style="list-style-type: none">◆ A regional scale includes a state or multi-state perspective.

Grade Level: Grade 8

Core Idea	Learning Standards as written	
Earth and Human Activity	8.MS-ESS3-1	<p>Analyze and interpret data to explain that the Earth's mineral and fossil fuel resources are unevenly distributed as a result of geologic processes.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none">◆ Examples of uneven distributions of resources can include where petroleum is generally found (locations of the burial of organic marine sediments and subsequent geologic traps), and where metal ores are generally found (locations of past volcanic and hydrothermal activity).
	8.MS-ESS3-5	<p>Examine and interpret data to describe the role that human activities have played in causing the rise in global temperatures over the past century.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">◆ Examples of human activities include fossil fuel combustion, deforestation, and agricultural activity.◆ Examples of evidence can include tables, graphs, and maps of global and regional temperatures; atmospheric levels of gases such as carbon dioxide and methane; and the rates of human activities.

ENTRY POINTS to Earth and Space Sciences Standards in Grades 6–8

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Earth's Place in the Universe	<p>1. Asking questions/defining problems</p> <ul style="list-style-type: none"> ◆ Ask questions about what would happen if a variable was changed in an investigation about how the Earth rotates on its axis (e.g., time of year, hemisphere, length of day) ◆ Ask questions about what would happen if a variable was changed in an investigation about phases of the moon (e.g., monthly cycle, relative position of Earth/moon/Sun) ◆ Identify scientific (testable) and non-scientific (non-testable) questions about the phases of the Moon after making observations ◆ Determine several criteria for success and constraints on materials, time, or cost, when defining a problem related to ocean tides ◆ Ask questions about the formation of different layers of rock or the relative ages of layers of rocks, including fossils found in the layers of rock <p>2. Planning and carrying out investigations</p> <ul style="list-style-type: none"> ◆ Plan and/or conduct an investigation about the conditions under which a type of rock layer is formed over time (e.g., heat, pressure, weathering, sedimentation) to produce data/observations to serve as evidence 	<p>3. Analyzing and interpreting data</p> <ul style="list-style-type: none"> ◆ Use observations and/or data from an investigation to determine the cause of the phases of the moon over the course of a month ◆ Represent data visually (e.g., models, pictographs) to reveal patterns about the cause of the phases of the moon over the course of a month ◆ Represent data visually (e.g., pictographs, time charts, graphs) to reveal patterns about the relationship between the moon's position and ocean tides ◆ Analyze and interpret data about the relative position of the Earth and the Sun to reveal patterns about seasonal changes (e.g., given diagrams of the Earth's tilt and the Sun's position, determine the season in each hemisphere) ◆ Analyze and interpret data about the age of various rock layers containing fossils (e.g., laws of superposition, cross cutting relationships) ◆ Compare and contrast data/observations showing various rock layers and the conditions under which they were formed over time ◆ Use observations and/or data to evaluate and/or refine design solutions related to ocean tides 	<p>5. Developing and using models</p> <ul style="list-style-type: none"> ◆ Develop, revise, and/or use a model to show/explain how the tilt of the Earth and position of the Earth relative to the Sun relate to seasonal changes ◆ Develop, revise, and/or use a model of the Earth-Sun-Moon system to show/explain the role of gravity in determining ocean tides ◆ Develop, revise, and/or use a model of the Earth-Sun-Moon system to show/explain the orbital motions of planets in the solar system ◆ Develop, revise, and/or use a model of the Earth-Sun-Moon system to show/explain eclipses of the Sun and Moon ◆ Develop, revise, and/or use a model to show/explain the structure of the universe, how there are many solar systems in a galaxy, and many galaxies in the universe <p>6. Constructing explanations</p> <ul style="list-style-type: none"> ◆ Draw conclusions based on multiple pieces of evidence about the ages of various rock layers (e.g., based on fossils) ◆ Draw conclusions based on multiple pieces of evidence (e.g., from investigations) about the cause of lunar phases or eclipses

ENTRY POINTS to Earth and Space Sciences Standards in Grades 6–8

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Earth's Place in the Universe (cont.)	2. Planning and carrying out investigations (cont.) <ul style="list-style-type: none"> Record observations and/or measurements to produce data to serve as evidence for investigations about tide variations in different coastal locations Record observations and/or measurements to produce data to serve as evidence for investigations about indexing fossils to determine the relative ages of rock formations Test two different models of the same proposed design solution related to ocean tides to determine which better meets criteria for success. 	4. Using mathematics and computational thinking <ul style="list-style-type: none"> Organize simple data sets to reveal patterns about the cause of the phases of the moon over the course of a month Use computations (e.g., addition, subtraction) to analyze data (e.g., averages, totals, differences) about ocean tides Describe, measure, and/or compare quantitative attributes of changes in the number of hours of daylight in different locations (e.g., Anchorage, Alaska; Boston, Massachusetts) on the same dates 	6. Constructing explanations (cont.) <ul style="list-style-type: none"> Generate and compare multiple solutions to a problem related to ocean tides (e.g., compare the benefits/drawbacks of each solution) Explain the relationship between the universe, galaxies, and solar systems (e.g., how there are many solar systems in a galaxy, and many galaxies in the universe) Explain how the gravity of the Sun and Moon affects ocean tides 7. Engaging in argument from evidence <ul style="list-style-type: none"> Critique an argument citing evidence from informational sources about the causes of eclipses or lunar phases Defend a claim that the ages of rock formations can be determined by using fossils as evidence Critique an argument citing evidence from informational sources about the cause of seasonal changes 8. Obtaining, evaluating, and communicating information <ul style="list-style-type: none"> Combine scientific information from multiple sources to explain how gravity causes tides Communicate scientific information or ideas (orally, graphically, textually, and/or mathematically) about the causes of seasons Research, record, and/or present information describing how the tilt of the Earth's axis and the position of Earth relative to the Sun are responsible for seasonal changes

Earth and Human Activity (cont.)			<p>8. Obtaining, evaluating, and communicating information</p> <ul style="list-style-type: none"> ◆ Combine scientific information from multiple sources to explain how human activities may have caused global climate change ◆ Communicate scientific information or ideas (orally, graphically, textually, and/or mathematically) about how human activities have caused a depletion of natural resources (e.g., water, mineral, and energy supplies) ◆ Communicate scientific information or ideas (orally, graphically, textually, and/or mathematically) about how past geological events are used to forecast the likelihood of catastrophic events ◆ Research and present information on how human activities, such as deforestation, agriculture, and combustion of fossil fuels, has contributed to global climate change

Science and Technology/Engineering Pre-K–Grade 8

LIFE SCIENCE

Core Idea	Access Skills	Grades Pre-K–2	Grades 3–5	Grades 6–8
From Molecules to Organisms: Structures and Processes	Pages 51–53	Pages 47–49, 61–63	Pages 71, 73–76	Pages 85, 87, 89, 91–93
Ecosystems: Interactions, Energy, and Dynamics	Pages 53–55	Pages 47, 50 63–66	Pages 74, 77–78	Pages 87–88, 94–96
Heredity: Inheritance and Variation of Traits	Pages 56–58	Pages 47, 49 66–68	Pages 71, 78–80	Pages 89–90, 97–98
Biological Evolution: Unity and Diversity	Pages 58–60	Pages 50, 68–70	Pages 71–72, 80–84	Pages 86, 90, 98–101

Grade Level: Pre-Kindergarten

Core Idea	Learning Standards as written	
From Molecules to Organisms: Structures and Processes	PreK-LS1-1(MA)	Compare, using descriptions and drawings, the external body parts of animals (including humans) and plants and explain functions of some of the observable body parts. Clarification Statement: ♦ Examples can include comparison of humans and horses: humans have two legs and horses four, but both use legs to move.
	PreK-LS1-2(MA)	Explain that most animals have five senses they use to gather information about the world around them.
	PreK-LS1-3(MA)	Use their five senses in their exploration and play to gather information.
Ecosystem: Interaction, Energy, and Dynamics	PreK-LS2-1(MA)	Use evidence from animals and plants to define several characteristics of living things that distinguish them from non-living things.
	PreK-LS2-2(MA)	Using evidence from the local environment, explain how familiar plants and animals meet their needs where they live. Clarification Statements: ♦ Basic needs include water, food, air, shelter, and, for most plants, light. ♦ Examples of evidence can include squirrels gathering nuts for the winter and plants growing in the presence of sun and water. ♦ The local environment includes the area around the student's school, home, or adjacent community.
	PreK-LS2-3(MA)	Give examples from the local environment of how animals and plants are dependent on one another to meet their basic needs.
Heredity: Inheritance and Variation of Traits	PreK-LS3-1(MA)	Use observations to explain that young plants and animals are like but not exactly like their parents. Clarification Statement: ♦ Examples of observations include puppies that look similar but not exactly the same as their parents.
	PreK-LS3-2(MA)	Use observations to recognize differences and similarities among themselves and their friends.

CONTENT Science and Technology/Engineering

DISCIPLINE Life Science

Grade Level: Kindergarten

Core Idea	Learning Standards as written	
From Molecules to Organisms: Structures and Processes	K-LS1-1	Observe and communicate that animals (including humans) and plants need food, water, and air to survive. Animals get food from plants or other animals. Plants make their own food and need light to live and grow.
	K-LS1-2(MA)	Recognize that all plants and animals grow and change over time.

Grade Level: Grade 1

Core Idea	Learning Standards as written	
From Molecules to Organisms: Structures and Processes	1-LS1-1	Use evidence to explain that (a) different animals use and take in food, water, and air, and (b) plants have roots, stems, leaves, flowers, and fruits that are used to take in water, air, and other nutrients, and produce food for the plant. Clarification Statement: <ul style="list-style-type: none">◆ Descriptions are not expected to include mechanisms such as the process of photosynthesis.
	1-LS1-2	Obtain information to compare ways in which the behavior of different animal parents and their offspring help the offspring to survive. Clarification Statement: <ul style="list-style-type: none">◆ Examples of behaviors could include the signals that offspring make (such as crying, cheeping, and other vocalizations) and the responses of the parents (such as feeding, comforting, and protecting the offspring).
Heredity: Inheritance and Variation of Traits	1-LS3-1	Use information from observations (first-hand and from media) to identify similarities and differences among individual plants or animals of the same kind. Clarification Statements: <ul style="list-style-type: none">◆ Examples of observations could include that leaves from the same kind of plant are the same shape but can differ in size.◆ Inheritance, animals that undergo metamorphosis, or hybrids are not expected.

Grade Level: Grade 2

Core Idea	Learning Standards as written	
Ecosystems: Interactions, Energy, and Dynamics	2-LS2-3(MA)	Develop and use models to compare how plants and animals depend on their surroundings and other living things to meet their needs in the places they live. Clarification Statement: <ul style="list-style-type: none">♦ Animals need food, water, air, shelter, and favorable temperature; plants need sufficient light, water, minerals, favorable temperature, and animals or other mechanisms to disperse seeds.
Biological Evolution: Unity and Diversity	2-LS4-1	Use texts, media, or local environments to observe and compare (a) different kinds of living things in an area, and (b) differences in the kinds of living things living in different types of areas. Clarification Statements: <ul style="list-style-type: none">♦ Examples of areas to compare can include temperate forest, desert, tropical rain forest, grassland, arctic, and aquatic.♦ Specific animal and plant names in specific areas are not expected.

ACCESS SKILLS to Life Science Standards

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
From Molecules to Organisms: Structures and Processes	1. Asking questions/defining problems <ul style="list-style-type: none"> Explore materials visually or by touch that represent body parts, body systems, senses, parts of plants, life cycle(s) or cells (specify accuracy criteria) Sustain exploration activity (e.g., vocalize when activity is interrupted) with materials representing body parts, body systems, senses, parts of plants, life cycle(s) or cells within a specified amount of time of the activity being interrupted Gain attention within a specified time block(s) to explore materials representing body parts, body systems, senses, parts of plants, life cycle(s) or cells Make a request to explore materials representing body parts, body systems, senses, parts of plants, life cycle(s) or cells within a specified amount of time Choose within a specified amount of time from an errorless array of materials related to body parts, body systems, senses, parts of plants, life cycle(s) or cells Match object to object, or picture to picture, of materials related to body parts, body systems, senses, parts of plants, life cycle(s), or cells Activate a device (within a specified amount of time) in a model representing the parts of a plant and/or animal 	3. Analyzing and interpreting data <ul style="list-style-type: none"> Grasp (hold) materials representing body parts, body systems, senses, parts of plants, life cycle(s) or cells for a specified amount of time in a comparison activity Release or give materials representing body parts, body systems, senses, parts of plants, life cycle(s) or cells within a specified amount of time in a comparison activity Turn on/off technology representing body parts, body systems, senses, parts of plants, life cycle(s) or cells within a specified amount of time in a comparison activity Move materials representing body parts, body systems, senses, parts of plants, life cycle(s) or cells in a comparison activity Use two hands to manipulate materials representing body parts, body systems, senses, parts of plants, life cycle(s) or cells in a comparison activity Imitate action representing body parts, body systems, senses, parts of plants, life cycle(s) or cells in a comparison activity Initiate cause and effect response representing body parts, body systems, senses, parts of plants, life cycle(s) or cells within a specified time block(s) in a comparison activity 	5. Developing and using models <ul style="list-style-type: none"> Track materials (shift focus from materials to speaker) in a model representing the parts of a plant and/or animal Orient or manipulate a model representing the parts of a plant and/or animal Functionally use materials related to a model representing the parts of a plant and/or animal Locate objects partially hidden or out of sight of a model representing the parts of a plant and/or animal Construct or assemble a model representing the parts of a plant and/or animal Use one object to act on another in a model representing the parts of a plant and/or animal Visually attend to (specify criteria) the creation, illustration or labeling of a model representing the parts of a plant and/or animal Grasp (hold) materials within a specified amount of time based on a model representing the parts of a plant and/or animal Use one object to act on another in the creation of a model representing the five senses Visually attend to (specify criteria) the creation, illustration or labeling of a model representing the life cycle of a plant/how a plant changes over time Activate a device (within a specified amount of time) in a model representing the parts of a plant and/or animal Activate a device (within a specified amount of time) to record relevant questions related to body parts, body systems, senses, parts of plants, life cycle(s) or cells
	2. Planning and carrying out investigations <ul style="list-style-type: none"> Grasp (hold) materials in an investigation about body parts, body systems, senses, parts of plants, life cycle(s) or cells for a specified amount of time 	4. Using mathematics and computational thinking <ul style="list-style-type: none"> Track materials in the creation of a table, chart, or graph to demonstrate how plants or animals grow and change over time 	6. Constructing explanations <ul style="list-style-type: none"> Orient or manipulate materials related to the creation of a written product to describe how plants and/or animals grow and change over time

ACCESS SKILLS to Life Science Standards

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
From Molecules to Organisms: Structures and Processes (cont.)	2. Planning and carrying out investigations (cont.) <ul style="list-style-type: none"> ◆ Release or give materials in an investigation about body parts, body systems, senses, parts of plants, life cycle(s) or cells within a specified amount of time of the directive ◆ Turn on/off technology in an investigation about body parts, body systems, senses, parts of plants, life cycle(s) or cells within a specified amount of time ◆ Move materials in an investigation about body parts, body systems, senses, parts of plants, life cycle(s) or cells ◆ Use two hands in an investigation about body parts, body systems, senses, parts of plants, life cycle(s) or cells ◆ Imitate action in an investigation about body parts, body systems, senses, parts of plants, life cycle(s) or cells ◆ Initiate cause and effect response in an investigation about body parts, body systems, senses, parts of plants, life cycle(s) or cells within a specified time block(s) ◆ Choose within a specified amount of time from an errorless array of materials during an investigation on body parts, body systems, senses, parts of plants, life cycle(s) or cells ◆ Explore materials visually or by touch during an investigation about body parts, body systems, senses, parts of plants, life cycle(s) or cells (specify accuracy criteria) 	4. Using mathematics and computational thinking (cont.) <ul style="list-style-type: none"> ◆ Orient or manipulate materials in the creation of a table, chart, or graph to demonstrate how plants or animals grow and change over time ◆ Functionally use materials in the creation of a table, chart, or graph to demonstrate how plants or animals grow and change over time ◆ Use one object to act on another in the creation of a table, chart, or graph demonstrating how plants or animals grow and change over time (e.g., glue stick to adhere materials to graph) ◆ Respond, within a specified amount of time, to counting and/or numbers to show data about the five senses 	7. Engaging in argument from evidence <ul style="list-style-type: none"> ◆ Initiate a cause-and-effect response within a specified amount of time, related to the creation of a written product to support an argument on how plants and/or animals grow and change over time 8. Biological Evolution: Unity and Diversity (cont.)			8. Obtaining, evaluating, and communicating information <ul style="list-style-type: none"> ◆ Recall and present information from observations, text, or media source about living things in a local habitat (e.g., school yard) ◆ Communicate scientific information or ideas about different habitats. ◆ Research, record evidence, and/or present information on plants and their specific habitats (e.g., rain forest, temperate forest, desert, arctic, ocean) ◆ Research, record evidence, and/or present information on animals and their specific habitats (e.g., rain forest, temperate forest, desert, arctic, ocean) ◆ Research, record evidence, and/or present information on the different kinds of living things in different habitats (e.g., rain forest, temperate forest, desert, arctic, ocean)

Grade Level: Grade 3

Core Idea	Learning Standards as written	
From Molecules to Organisms: Structures and Processes	3-LS1-1	<p>Use simple graphical representations to show that different types of organisms have unique and diverse life cycles. Describe that all organisms have birth, growth, reproduction, and death in common but there are a variety of ways in which these happen.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Examples can include different ways plants and animals begin (e.g., sprout from a seed, born from an egg), grow (e.g., increase in size and weight, produce a new part), reproduce (e.g., develop seeds, root runners, mate and lay eggs that hatch), and die (e.g., length of life). ◆ Plant life cycles should focus on those of flowering plants. ◆ Describing variation in organism life cycles should focus on comparisons of the general stages of each, not specifics.
Heredity: Inheritance and Variation of Traits	3-LS3-1	<p>Provide evidence, including through the analysis of data, that plants and animals have traits inherited from parents and that variation of these traits exist in a group of similar organisms.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Examples of inherited traits that vary can include the color of fur, shape of leaves, length of legs, and size of flowers. ◆ Focus should be on non-human examples.
	3-LS3-2	<p>Distinguish between inherited characteristics and those characteristics that result from a direct interaction with the environment. Give examples of characteristics of living organisms that are influenced by both inheritance and the environment.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Examples of the environment affecting a characteristic could include normally tall plants stunted because they were grown with insufficient water or light, a lizard missing a tail due to a predator, and a pet dog becoming overweight because it is given too much food and little exercise. ◆ Focus should be on non-human examples.
Biological Evolution: Unity and Diversity	3-LS4-1	<p>Use fossils to describe types of organisms and their environments that existed long ago and compare those to living organisms and their environments. Recognize that most kinds of plants and animals that once lived on Earth are no longer found anywhere.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none"> ◆ Comparisons should focus on physical or observable features.

Grade Level: Grade 3

Core Idea	Learning Standards as written	
Biological Evolution: Unity and Diversity (cont.)	3-LS4-2	Use evidence to construct an explanation for how the variations in characteristics among individuals within the same species may provide advantages to these individuals in their survival and reproduction. Clarification Statements: <ul style="list-style-type: none">◆ Examples can include rose bushes of the same species, one with slightly longer thorns than the other which may prevent its predation by deer, and color variation within a species that may provide advantages so one organism may be more likely to survive and therefore more likely to produce offspring.◆ Examples of evidence could include needs and characteristics of the organisms and habitats involved.
	3-LS4-3	Construct an argument with evidence that in a particular environment some organisms can survive well, some survive less well, and some cannot survive. Clarification Statement: <ul style="list-style-type: none">◆ Examples of evidence could include needs and characteristics of the different organisms (species) and habitats involved.
	3-LS4-4	Analyze and interpret given data about changes in a habitat and describe how the changes may affect the ability of organisms that live in that habitat to survive and reproduce. Clarification Statements: <ul style="list-style-type: none">◆ Changes should include changes to landforms, distribution of water, climate, and availability of resources.◆ Changes in the habitat could range in time from a season to a decade.◆ While it is understood that ecological changes are complex, the focus should be on a single change to the habitat.
	3-LS4-5(MA)	Provide evidence to support a claim that the survival of a population is dependent upon reproduction.

Grade Level: Grade 4

Core Idea	Learning Standards as written	
From Molecules to Organisms: Structures and Processes	4-LS1-1	<p>Construct an argument that animals and plants have internal and external structures that support their survival, growth, behavior, and reproduction.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">♦ Animal structures can include legs, wings, fins, feathers, trunks, claws, horns, antennae, eyes, ears, nose, heart, stomach, lung, brain, and skin.♦ Plant structures can include leaves, roots, stems, bark, branches, flowers, fruit, and seeds.

Grade Level: Grade 5

Core Idea	Learning Standards as written	
From Molecules to Organisms: Structures and Processes	5-LS1-1	Ask testable questions about the process by which plants use air, water, and energy from sunlight to produce sugars and plant materials needed for growth and reproduction.
Ecosystems: Interaction, Energy, and Dynamics	5-LS2-1	Develop a model to describe the movement of matter among producers, consumers, decomposers, and the air, water, and soil in the environment to (a) show that plants produce sugars and plant materials, (b) show that animals can eat plants and/or other animals for food, and (c) show that some organisms, including fungi and bacteria, break down dead organisms and recycle some materials back to the air and soil. Clarification Statement: <ul style="list-style-type: none">◆ Emphasis is on matter moving throughout the ecosystem.
	5-LS2-2(MA)	Compare at least two designs for a composteur to determine which is most likely to encourage decomposition of materials. * Clarification Statement: <ul style="list-style-type: none">◆ Measures or evidence of decomposition should be on qualitative descriptions or comparisons.

ENTRY POINTS to Life Science Standards in Grades 3–5

ENTRY POINTS to
Life Science Standards in Grades 3–5

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Biological Evolution: Unity and Diversity (cont.)			<p>8. Obtaining, evaluating, and communicating information (cont.)</p> <ul style="list-style-type: none"> ◆ Communicate scientific information or ideas (orally, graphically, textually, and/or mathematically) comparing fossils to living organisms and their environments upon reproduction (e.g., endangered species) ◆ Research, record evidence, and/or present information about how survival of a population is dependent ◆ Research, record evidence, and/or present information about how seasonal behaviors (e.g., leaf loss, migration, hibernation, and storing food) help plants or animals survive environmental changes

Grade Level: Grade 6

Core Idea	Learning Standards as written	
From Molecules to Organisms: Structures and Processes	6.MS-LS1-1	<p>Provide evidence that all organisms (unicellular and multicellular) are made of cells.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none">◆ Evidence can be drawn from multiple types of organisms, such as plants, animals, and bacteria.
	6.MS-LS1-2	<p>Develop and use a model to describe how parts of cells contribute to the cellular functions of obtaining food, water, and other nutrients from its environment, disposing of wastes, and providing energy for cellular processes.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none">◆ Parts of plant and animal cells include (a) the nucleus, which contains a cell's genetic material and regulates its activities; (b) chloroplasts, which produce necessary food (sugar) and oxygen through photosynthesis (in plants); (c) mitochondria, which release energy from food through cellular respiration; (d) vacuoles, which store materials, including water, nutrients, and waste; (e) the cell membrane, which is a selective barrier that enables nutrients to enter the cell and wastes to be expelled; and (f) the cell wall, which provides structural support (in plants).
	6.MS-LS1-3	<p>Construct an argument supported by evidence that the body systems interact to carry out essential functions of life.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">◆ Emphasis is on the functions and interactions of the body systems, not specific body parts or organs.◆ An argument should convey that different types of cells can join together to form specialized tissues, which in turn may form organs that work together as body systems.◆ Body systems to be included are the circulatory, digestive, respiratory, excretory, muscular/skeletal, and nervous systems.◆ Essential functions of life include obtaining food and other nutrients (water, oxygen, minerals), releasing energy from food, removing wastes, responding to stimuli, maintaining internal conditions, and growing/developing.◆ An example of interacting systems could include the respiratory system taking in oxygen from the environment which the circulatory system delivers to cells for cellular respiration, or the digestive system taking in nutrients which the circulatory system transports to cells around the body.

Grade Level: Grade 6

Core Idea	Learning Standards as written	
Biological Evolution: Unity and Diversity Biological Evolution: Unity and Diversity	6.MS-LS4-1	Analyze and interpret evidence from the fossil record to describe organisms and their environment, extinctions, and changes to life forms throughout the history of Earth. Clarification Statement: <ul style="list-style-type: none">◆ Examples of evidence include sets of fossils that indicate a specific type of environment, anatomical structures that indicate the function of an organism in the environment, and fossilized tracks that indicate behavior of organisms.
	6.MS-LS4-2	Construct an argument using anatomical structures to support evolutionary relationships among and between fossil organisms and modern organisms. Clarification Statement: <ul style="list-style-type: none">◆ Evolutionary relationships include (a) some organisms have similar traits with similar functions because they were inherited from a common ancestor, (b) some organisms have similar traits that serve similar functions because they live in similar environments, and (c) some organisms have traits inherited from common ancestors that no longer serve their original function because their environments are different than their ancestors' environments.

Grade Level: Grade 7

Core Idea	Learning Standards as written	
From Molecules to Organisms: Structures and Processes	7.MS-LS1-4	<p>Construct an explanation based on evidence for how characteristic animal behaviors and specialized plant structures increase the probability of successful reproduction of animals and plants.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">◆ Examples of animal behaviors that affect the probability of animal reproduction could include nest building to protect young from cold, herding of animals to protect young from predators, and vocalizations and colorful plumage to attract mates for breeding.◆ Examples of animal behaviors that affect the probability of plant reproduction could include (a) transferring pollen or seeds and (b) creating conditions for seed germination and growth.◆ Examples of plant structures that affect the probability of plant reproduction could include bright flowers attracting butterflies that transfer pollen, flower nectar, and odors that attract insects that transfer pollen, and hard shells on nuts that squirrels bury.
	7.MS-LS2-1	Analyze and interpret data to provide evidence for the effects of periods of abundant and scarce resources on the growth of organisms and the size of populations in an ecosystem.
	7.MS-LS2-2	<p>Describe how relationships among and between organisms in an ecosystem can be competitive, predatory, parasitic, and mutually beneficial and that these interactions are found across multiple ecosystems.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none">◆ Emphasis is on describing consistent patterns of interactions in different ecosystems in terms of relationships among and between organisms.
Ecosystems: Inter-actions, Energy, and Dynamics	7.MS-LS2-3	<p>Develop a model to describe that matter and energy are transferred among living and nonliving parts of an ecosystem and that both matter and energy are conserved through these processes.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">◆ Cycling of matter should include the role of photosynthesis, cellular respiration, and decomposition, as well as transfer among producers, consumers (primary, secondary, and tertiary), and decomposers.◆ Models may include food webs and food chains.

Grade Level: Grade 7

Core Idea	Learning Standards as written	
Ecosystems: Inter-actions, Energy, and Dynamics (cont.)	7.MS-LS2-4	Analyze data to provide evidence that disruptions (natural or human-made) to any physical or biological component of an ecosystem can lead to shifts in all its populations. Clarification Statement: <ul style="list-style-type: none">◆ Focus should be on ecosystem characteristics varying over time, including disruptions such as hurricanes, floods, wildfires, oil spills, and construction.
	7.MS-LS2-5	Evaluate competing design solutions for protecting an ecosystem. Discuss benefits and limitations of each design. * Clarification Statements: <ul style="list-style-type: none">◆ Examples of design solutions could include water, land, and species protection and the prevention of soil erosion.◆ Examples of design solution constraints could include scientific, economic, and social considerations.
	7.MS-LS2-6(MA)	Explain how changes to the biodiversity of an ecosystem—the variety of species found in the ecosystem—may limit the availability of resources humans use. Clarification Statement: <ul style="list-style-type: none">◆ Examples of resources can include food, energy, medicine, and clean water.

Grade Level: Grade 8

Core Idea	Learning Standards as written	
From Molecules to Organisms: Structures and Processes	8.MS-LS1-5	Construct an argument based on evidence for how environmental and genetic factors influence the growth of organisms. Clarification Statements: <ul style="list-style-type: none">◆ Examples of environmental conditions could include availability of food, light, space, and water.◆ Examples of genetic factors could include the genes responsible for size differences in different breeds of dogs, such as Great Danes and Chihuahuas.◆ Examples of environmental factors could include drought decreasing plant growth, fertilizer increasing plant growth, and fish growing larger in large ponds than they do in small ponds.◆ Examples of both genetic and environmental factors could include different varieties of plants growing at different rates in different conditions.
	8.MS-LS1-7	Use informational text to describe that food molecules, including carbohydrates, proteins, and fats, are broken down and rearranged through chemical reactions forming new molecules that support cell growth and/or release of energy.
Heredity: Inheritance and Variation of Traits	8.MS-LS3-1	Develop and use a model to describe that structural changes to genes (mutations) may or may not result in changes to proteins, and if there are changes to proteins there may be harmful, beneficial, or neutral changes to traits. Clarification Statements: <ul style="list-style-type: none">◆ An example of a beneficial change to the organism may be a strain of bacteria becoming resistant to an antibiotic.◆ A harmful change could be the development of cancer; a neutral change may change the hair color of an organism with no direct consequence.
	8.MS-LS3-2	Construct an argument based on evidence for how asexual reproduction results in offspring with identical genetic information and sexual reproduction results in offspring with genetic variation. Compare/contrast advantages and disadvantages of asexual and sexual reproduction. Clarification Statements: <ul style="list-style-type: none">◆ Examples of an advantage of sexual reproduction can include genetic variation when the environment changes or a disease is introduced, while examples of an advantage of asexual reproduction can include not using energy to find a mate and fast reproduction rates.◆ Examples of a disadvantage of sexual reproduction can include using resources to find a mate, while a disadvantage in asexual reproduction can be the lack of genetic variation when the environment changes or a disease is introduced.

Grade Level: Grade 8

Core Idea	Learning Standards as written	
Heredity: Inheritance and Variation of Traits (cont.)	8.MS-LS3-4(MA)	<p>Develop and use a model to show that sexually reproducing organisms have two of each chromosome in their cell nuclei, and hence two variants (alleles) of each gene that can be the same or different from each other, with one random assortment of each chromosome passed down to offspring from both parents.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none">◆ Examples of models can include Punnett squares, diagrams (e.g., simple pedigrees), and simulations.
Biological Evolution: Unity and Diversity Biological Evolution: Unity and Diversity	8.MS-LS4-4	<p>Use a model to describe the process of natural selection, in which genetic variations of some traits in a population increase some individuals' likelihood of surviving and reproducing in a changing environment. Provide evidence that natural selection occurs over many generations.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">◆ The model should include simple probability statements and proportional reasoning.◆ Examples of evidence can include Darwin's finches, necks of giraffes, and peppered moths.
	8.MS-LS4-5	<p>Synthesize and communicate information about artificial selection, or the ways in which humans have changed the inheritance of desired traits in organisms.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none">◆ Emphasis is on the influence of humans on genetic outcomes in artificial selection (such as genetic modification, animal husbandry, and gene therapy).

Grade Level: Pre-Kindergarten

Core Idea	Learning Standards as written	
Matter and Its Inter-actions	PreK-PS1-1(MA)	Raise questions and investigate the differences between liquids and solids and develop awareness that a liquid can become a solid and vice versa.
	PreK-PS1-2(MA)	Investigate natural and human-made objects to describe, compare, sort, and classify objects based on observable physical characteristics, uses, and whether something is manufactured or occurs in nature.
	PreK-PS1-3(MA)	Differentiate between the properties of an object and those of the material of which it is made.
	PreK-PS1-4(MA)	Recognize through investigation that physical objects and materials can change under different circumstances. Clarification Statement: <ul style="list-style-type: none">◆ Changes include building up or breaking apart, mixing, dissolving, and changing state.
Motion and Stability: Forces and Inter-actions	PreK-PS2-1(MA)	Using evidence, discuss ideas about what is making something move the way it does and how some movements can be controlled.
	PreK-PS2-2(MA)	Through experience, develop awareness of factors that influence whether things stand or fall. Clarification Statement: <ul style="list-style-type: none">◆ Examples of factors in children's construction play include using a broad foundation when building, considering the strength of materials, and using balanced weight distribution in a block building.
Waves and Their Applications in Technologies for Information Transfer	PreK-PS4-1(MA)	Investigate sounds made by different objects and materials and discuss explanations about what is causing the sounds. Through play and investigations, identify ways to manipulate different objects and materials that make sound to change volume and pitch.
	PreK-PS4-2(MA)	Connect daily experiences and investigations to demonstrate the relationships between the size and shape of shadows, the objects creating the shadow, and the light source.

Grade Level: Kindergarten

Core Idea	Learning Standards as written	
Matter and Its Interactions	K-PS1-1(MA)	<p>Investigate and communicate the idea that different kinds of materials can be solid or liquid depending on temperature.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">◆ Materials chosen must exhibit solid and liquid states in a reasonable temperature range for kindergarten students (e.g., 0–80°F), such as water, crayons, or glue sticks.◆ Only a qualitative description of temperature, such as hot, warm, and cool, is expected.
Motion and Stability: Forces and Interactions	K-PS2-1	<p>Compare the effects of different strengths or different directions of pushes and pulls on the motion of an object.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">◆ Examples of pushes or pulls could include a string attached to an object being pulled, a person pushing an object, a person stopping a rolling ball, and two objects colliding and pushing on each other.◆ Comparisons should be on different relative strengths or different directions, not both at the same time.◆ Non-contact pushes or pulls such as those produced by magnets are not expected.
Energy	K-PS3-1	<p>Make observations to determine that sunlight warms materials on Earth's surface.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">◆ Examples of materials on Earth's surface could include sand, soil, rocks, and water.◆ Measures of temperature should be limited to relative measures such as warmer/cooler.
	K-PS3-2	<p>Use tools and materials to design and build a model of a structure that will reduce the warming effect of sunlight on an area. *</p>

Grade Level: Grade 1

Core Idea	Learning Standards as written	
Waves and Their Applications in Technologies for Information Transfer	1-PS4-1	Demonstrate that vibrating materials can make sound and that sound can make materials vibrate. Clarification Statements: <ul style="list-style-type: none">◆ Examples of vibrating materials that make sound could include tuning forks, a stretched string or rubber band, and a drum head.◆ Examples of how sound can make materials vibrate could include holding a piece of paper near a speaker making sound and holding an object near a vibrating tuning fork.
	1-PS4-3	Conduct an investigation to determine the effect of placing materials that allow light to pass through them, allow only some light through them, block all the light, or redirect light when put in the path of a beam of light. Clarification Statements: <ul style="list-style-type: none">◆ Effects can include some or all light passing through, creation of a shadow, and redirecting light.◆ Quantitative measures are not expected.
	1-PS4-4	Use tools and materials to design and build a device that uses light or sound to send a signal over a distance. * Clarification Statements: <ul style="list-style-type: none">◆ Examples of devices could include a light source to send signals, paper cup and string "telephones," and a pattern of drum beats.◆ Technological details for how communication devices work are not expected.

Grade Level: Grade 2

Core Idea	Learning Standards as written	
Matter and Its Interactions	2-PS1-1	Describe and classify different kinds of materials by observable properties of color, flexibility, hardness, texture, and absorbency.
	2-PS1-2	Test different materials and analyze the data obtained to determine which materials have the properties that are best suited for an intended purpose. * Clarification Statements: <ul style="list-style-type: none">◆ Examples of properties could include, color, flexibility, hardness, texture, and absorbency.◆ Data should focus on qualitative and relative observations.
	2-PS1-3	Analyze a variety of evidence to conclude that when a chunk of material is cut or broken into pieces, each piece is still the same material and, however small each piece is, has weight. Show that the material properties of a small set of pieces do not change when the pieces are used to build larger objects. Clarification Statements: <ul style="list-style-type: none">◆ Materials should be pure substances or microscopic mixtures that appear contiguous at observable scales.◆ Examples of pieces could include blocks, building bricks, and other assorted small objects.
	2-PS1-4	Construct an argument with evidence that some changes to materials caused by heating or cooling can be reversed and some cannot. Clarification Statements: <ul style="list-style-type: none">◆ Examples of reversible changes could include materials such as water and butter at different temperatures.◆ Examples of irreversible changes could include cooking an egg, freezing a plant leaf, and burning paper.
Energy	2-PS3-1(MA)	Design and conduct an experiment to show the effects of friction on the relative temperature and speed of objects that rub against each other. Clarification Statements: <ul style="list-style-type: none">◆ Examples could include an object sliding on rough vs. smooth surfaces.◆ Observations of temperature and speed should be qualitative.

ACCESS SKILLS to Physical Science Standards

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Matter and Its Interactions	<p>1. Asking questions/defining problems</p> <ul style="list-style-type: none"> Explore materials representing changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change visually or by touch (Specify accuracy criteria) Sustain exploration activity (e.g., vocalize when activity is interrupted) with materials representing changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical change for specified time block Gain attention within a specified time block(s) to explore materials representing changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change Make a request to explore materials representing changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change within a specified amount of time Choose within a specified amount of time from an errorless array of materials related to changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change 	<p>3. Analyzing and interpreting data</p> <ul style="list-style-type: none"> Grasp (hold) materials related to changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change for a specified amount of time in a comparison activity Release or give materials related to changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change within a specified amount of time in a comparison activity Turn on/off technology related to changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change within a specified amount of time in a comparison activity Move materials related to changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change in a comparison activity Use two hands to manipulate materials related to changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change in a comparison activity 	<p>5. Developing and using models</p> <ul style="list-style-type: none"> Track (shift focus from materials to speaker) materials or models related to changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change Orient or manipulate materials or models related to changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change Functionally use materials or models related to the changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change Locate objects partially hidden or out of sight in a changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change activity Construct or assemble a model related to changing states of matter (solid, liquid) or qualitative temperature (hot, warm, cool) or properties of materials, (color, flexibility, texture, hardness, or absorbency) or physical/chemical reaction/change specifying accuracy criteria

Grade Level: Grade 3

Core Idea	Learning Standards as written	
Motion and Stability: Forces and Interactions	3-PS2-1	<p>Provide evidence to explain the effect of multiple forces, including friction, on an object. Include balanced forces that do not change the motion of the object and unbalanced forces that do change the motion of the object.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">◆ Descriptions of force magnitude should be qualitative and relative.◆ Force due to gravity is appropriate but only as a force that pulls objects down.
	3-PS2-3	<p>Conduct an investigation to determine the nature of the forces between two magnets based on their orientations and distance relative to each other.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none">◆ Focus should be on forces produced by magnetic objects that are easily manipulated.
	3-PS2-4	<p>Define a simple design problem that can be solved by using interactions between magnets. *</p> <p>Clarification Statement:</p> <ul style="list-style-type: none">◆ Examples of problems could include constructing a latch to keep a door shut and creating a device to keep two moving objects from touching each other.

Grade Level: Grade 4

Core Idea	Learning Standards as written	
Energy	4-PS3-1	Use evidence to construct an explanation relating the speed of an object to the energy of that object.
	4-PS3-2	Make observations to show that energy can be transferred from place to place by sound, light, heat, and electric currents. Clarification Statement: <ul style="list-style-type: none">◆ Evidence of energy being transferred can include vibrations felt a small distance from a source, a solar-powered toy that moves when placed in direct light, warming a metal object on one end and observing the other end getting warm, and a wire carrying electric energy from a battery to light a bulb.
	4-PS3-3	Ask questions and predict outcomes about the changes in energy that occur when objects collide. Clarification Statement: <ul style="list-style-type: none">◆ Changes in energy can include a change in the object's motion, position, and the generation of heat and/or sound.
	4-PS3-4	Apply scientific principles of energy and motion to test and refine a device that converts kinetic energy to electrical energy or uses stored energy to cause motion or produce light or sound. * Clarification Statement: <ul style="list-style-type: none">◆ Sources of stored energy can include water in a bucket, or a weight suspended at a height, and a battery.
Waves and Their Applications in Technologies for Information Transfer	4-PS4-1	Develop a model of a simple mechanical wave (including sound) to communicate that waves (a) are regular patterns of motion along which energy travels and (b) can cause objects to move. Clarification Statement: <ul style="list-style-type: none">◆ Examples of models could include diagrams, analogies, and physical models.
	4-PS4-2	Develop a model to describe that light must reflect off an object and enter the eye for the object to be seen.
	4-PS4-3	Develop and compare multiple ways to transfer information through encoding, sending, receiving, and decoding a pattern. * Clarification Statement: <ul style="list-style-type: none">◆ Examples of solutions could include drums sending coded information through sound waves, using a grid of 1s and 0s representing black and white to send information about a picture, and using Morse code to send text.

Grade Level: Grade 5

Core Idea	Learning Standards as written	
Matter and Its Interactions	5-PS1-1	Use a particle model of matter to explain common phenomena involving gases, and phase changes between gas and liquid and between liquid and solid. Clarification Statement: <ul style="list-style-type: none">◆ Examples of common phenomena the model should be able to describe include adding air to expand a balloon, compressing air in a syringe, and evaporating water from a salt water solution.
	5-PS1-2	Measure and graph the weights (masses) of substances before and after a reaction or phase change to provide evidence that regardless of the type of change that occurs when heating, cooling, or combining substances, the total weight (mass) of matter is conserved. Clarification Statement: <ul style="list-style-type: none">◆ Assume that reactions with any gas production are conducted in a closed system.
	5-PS1-3	Make observations and measurements of substances to describe characteristic properties of each, including color, hardness, reflectivity, electrical conductivity, thermal conductivity, response to magnetic forces, and solubility. Clarification Statements: <ul style="list-style-type: none">◆ Emphasis is on describing how each substance has a unique set of properties.◆ Examples of substances could include baking soda and other powders, metals, minerals, and liquids.
	5-PS1-4	Conduct an experiment to determine whether the mixing of two or more substances results in new substances with new properties (a chemical reaction) or not (a mixture).
Motion and Stability: Forces and Interactions	5-PS2-1	Support an argument with evidence that the gravitational force exerted by Earth on objects is directed toward Earth's center.
Energy	5-PS3-1	Use a model to describe that the food animals digest (a) contains energy that was once energy from the Sun, and (b) provides energy and nutrients for life processes, including body repair, growth, motion, body warmth, and reproduction. Clarification Statement: <ul style="list-style-type: none">◆ Examples of models could include diagrams and flow charts.

ENTRY POINTS to Physical Science Standards in Grades 3–5

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Matter and Its Interactions	<p>1. Asking questions/defining problems</p> <ul style="list-style-type: none"> ◆ Use observations and/or data to ask relevant questions about phase changes (i.e., changes between solids, liquids, or gases) ◆ Use observations and/or data to ask relevant questions about the weights (masses) of substances before and after a chemical reaction and/or phase change ◆ Use observations and/or data to ask relevant questions about whether combining two substances results in a new substance or a mixture ◆ Identify questions that can be answered by an investigation about physical and chemical changes ◆ Generate scientific questions about the characteristics of specific materials (e.g., are they absorbent, reflective, transparent; do they retain heat?) ◆ Identify questions that can be answered by an investigation about phase changes <p>2. Planning and carrying out investigations</p> <ul style="list-style-type: none"> ◆ Plan and/or follow the steps of an investigation to collect data and/or observations about solids, liquids, and gases ◆ Plan and/or follow the steps of an investigation to collect data and/or observations about changes in weight (mass) of a substance in a closed container or system as a result of heating, cooling, or combining with another substance 	<p>3. Analyzing and interpreting data</p> <ul style="list-style-type: none"> ◆ Compare predictions to the data and/or observations from an investigation about phase changes ◆ Use data and/or observations to identify patterns about the characteristic properties of different materials (e.g., metals have similar properties) ◆ Use data and/or observations to identify relationships between changes in properties and chemical reactions ◆ Use data and/or observations to identify relationships between the weights (masses) of substances before and after a chemical reaction and/or physical change (e.g., phase change or mixture) ◆ Draw conclusions based on evidence (e.g., from an investigation) about whether combining two substances results in a new substance or a mixture ◆ Compare predictions to the data and/or observations from an investigation regarding characteristics of materials before and after a chemical or physical change <p>4. Using mathematics and computational thinking</p> <ul style="list-style-type: none"> ◆ Describe, measure, and/or compare the weight (mass) of a substance before and after a chemical reaction and/or physical change (e.g., phase change or mixture) 	<p>5. Developing and using models</p> <ul style="list-style-type: none"> ◆ Compare models of different substances in a specific phase to identify common features and differences. ◆ Illustrate or develop a model to show/explain phase changes between gases, liquids, and solids ◆ Illustrate or develop a model to show/explain common phenomena involving gases (e.g., adding air to expand a balloon, compressing air in a syringe) <p>6. Constructing explanations</p> <ul style="list-style-type: none"> ◆ Describe how substances change from liquid to gas and vice versa and/or liquids to solids and vice versa ◆ Describe the relationship between gases, liquids, and solids ◆ Describe the relationship between the weights (masses) of substances before and after a chemical reaction and/or physical change (e.g., phase change or mixture) ◆ Explain how to determine that the characteristic properties of a substance have changed ◆ Explain how to determine whether combining two substances results in a new substance or a mixture ◆ Explain common phenomena involving gases (e.g., adding air to expand a balloon, compressing air in a syringe)

CONTENT Science and Technology/Engineering
DISCIPLINE Physical Science

Grade Level: Grade 6

Core Idea	Learning Standards as written	
Matter and Its Interactions	6.MS-PS1-6	Plan and conduct an experiment involving exothermic and endothermic chemical reactions to measure and describe the release or absorption of thermal energy. Clarification Statements: <ul style="list-style-type: none"> ◆ Emphasis is on describing transfer of energy to and from the environment. ◆ Examples of chemical reactions could include dissolving ammonium chloride or calcium chloride.
	6.MS-PS1-7(MA)	Use a particulate model of matter to explain that density is the amount of matter (mass) in a given volume. Apply proportional reasoning to describe, calculate, and compare relative densities of different materials.
	6.MS-PS1-8(MA)	Conduct an experiment to show that many materials are mixtures of pure substances that can be separated by physical means into their component pure substances. Clarification Statement: <ul style="list-style-type: none"> ◆ Examples of common mixtures include salt water, oil and vinegar, milk, and air.
Motion and Stability: Forces and Interactions	6.MS-PS2-4	Use evidence to support the claim that gravitational forces between objects are attractive and are only noticeable when one or both of the objects have a very large mass. Clarification Statement: <ul style="list-style-type: none"> ◆ Examples of objects with very large masses include the Sun, Earth, and other planets.
Waves and Their Applications in Technologies for Information Transfer	6.MS-PS4-1	Use diagrams of a simple wave to explain that (a) a wave has a repeating pattern with a specific amplitude, frequency, and wavelength, and (b) the amplitude of a wave is related to the energy of the wave.
	6.MS-PS4-2	Use diagrams and other models to show that both light rays and mechanical waves are reflected, absorbed, or transmitted through various materials. Clarification Statements: <ul style="list-style-type: none"> ◆ Materials may include solids, liquids, and gases. ◆ Mechanical waves (including sound) need a material (medium) through which they are transmitted. ◆ Examples of models could include drawings, simulations, and written descriptions.
	6.MS-PS4-3	Present qualitative scientific and technical information to support the claim that digitized signals (sent as wave pulses representing 0s and 1s) can be used to encode and transmit information.

Grade Level: Grade 7

Core Idea	Learning Standards as written	
Motion and Stability: Forces and Interactions	7.MS-PS2-3	Analyze data to describe the effect of distance and magnitude of electric charge on the strength of electric forces. Clarification Statement: <ul style="list-style-type: none">◆ Includes both attractive and repulsive forces.
	7.MS-PS2-5	Use scientific evidence to argue that fields exist between objects with mass, between magnetic objects, and between electrically charged objects that exert force on each other even though the objects are not in contact. Clarification Statement: <ul style="list-style-type: none">◆ Emphasis is on evidence that demonstrates the existence of fields, limited to gravitational, electric, and magnetic fields.
Energy	7.MS-PS3-1	Construct and interpret data and graphs to describe the relationships among kinetic energy, mass, and speed of an object. Clarification Statements: <ul style="list-style-type: none">◆ Examples could include riding a bicycle at different speeds and rolling different-sized rocks downhill.◆ Consider relationships between kinetic energy vs. mass and kinetic energy vs. speed separate from each other; emphasis is on the difference between the linear and exponential relationships.
	7.MS-PS3-2	Develop a model to describe the relationship between the relative positions of objects interacting at a distance and their relative potential energy in the system. Clarification Statements: <ul style="list-style-type: none">◆ Examples of objects within systems interacting at varying distances could include Earth and either a roller coaster cart at varying positions on a hill or objects at varying heights on shelves, changing the direction/orientation of a magnet, and a balloon with static electrical charge being brought closer to a stream of water.◆ Examples of models could include representations, diagrams, pictures, and written descriptions of systems.
	7.MS-PS3-3	Apply scientific principles of energy and heat transfer to design, construct, and test a device to minimize or maximize thermal energy transfer.* Clarification Statement: <ul style="list-style-type: none">◆ Examples of devices could include an insulated box, a solar cooker, and a vacuum flask.

Grade Level: Grade 7

Core Idea	Learning Standards as written	
Energy (cont.)	7.MS-PS3-4	Conduct an investigation to determine the relationships among the energy transferred, how well the type of matter retains or radiates heat, the mass, and the change in the average kinetic energy of the particles as measured by the temperature of the sample.
	7.MS-PS3-5	Present evidence to support the claim that when the kinetic energy of an object changes, energy is transferred to or from the object. Clarification Statement: <ul style="list-style-type: none">♦ Examples of empirical evidence could include an inventory or other representation of the energy before and after the transfer in the form of temperature changes or motion of an object.
	7.MS-PS3-6(MA)	Use a model to explain how thermal energy is transferred out of hotter regions or objects and into colder ones by convection, conduction, and radiation.
	7.MS-PS3-7(MA)	Use informational text to describe the relationship between kinetic and potential energy and illustrate conversions from one form to another. Clarification Statement: <ul style="list-style-type: none">♦ Types of kinetic energy include motion, sound, thermal, and light; types of potential energy include gravitational, elastic, and chemical.

Grade Level: Grade 8

Core Idea	Learning Standards as written	
Matter and Its Interactions	8.MS-PS1-1	<p>Develop a model to describe that (a) atoms combine in a multitude of ways to produce pure substances which make up all of the living and nonliving things that we encounter, (b) atoms form molecules and compounds that range in size from two to thousands of atoms, and (c) mixtures are composed of different proportions of pure substances.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none">◆ Examples of molecular-level models could include drawings, three-dimensional ball and stick structures, and computer representations showing different molecules with different types of atoms.
	8.MS-PS1-2	<p>Analyze and interpret data on the properties of substances before and after the substances interact to determine if a chemical reaction has occurred.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">◆ Examples of reactions could include burning sugar or steel wool, fat reacting with sodium hydroxide, and mixing zinc with HCl.◆ Properties of substances include density, melting point, boiling point, solubility, flammability, and odor.
	8.MS-PS1-4	<p>Develop a model that describes and predicts changes in particle motion, relative spatial arrangement, temperature, and state of a pure substance when thermal energy is added or removed.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">◆ Emphasis is on qualitative molecular-level models of solids, liquids, and gases to show that adding or removing thermal energy increases or decreases kinetic energy of the particles until a change of state occurs.◆ Examples of models could include drawings and diagrams.◆ Examples of pure substances could include water, carbon dioxide, and helium.
	8.MS-PS1-5	<p>Use a model to explain that atoms are rearranged during a chemical reaction to form new substances with new properties. Explain that the atoms present in the reactants are all present in the products and thus the total number of atoms is conserved.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none">◆ Examples of models can include physical models or drawings, including digital forms, that represent atoms.

Grade Level: Grade 8

Core Idea	Learning Standards as written	
Motion and Stability: Forces and Interactions	8.MS-PS2-1	Develop a model that demonstrates Newton's third law involving the motion of two colliding objects.
	8.MS-PS2-2	<p>Provide evidence that the change in an object's speed depends on the sum of the forces on the object (the net force) and the mass of the object.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none">◆ Emphasis is on balanced (Newton's first law) and unbalanced forces in a system, qualitative comparisons of forces, mass, and changes in speed (Newton's second law) in one dimension.

Grade Level: Grade 7

Core Idea	Learning Standards as written	
Engineering Design	7.MS-ETS1-2	Evaluate competing solutions to a given design problem using a decision matrix to determine how well each meets the criteria and constraints of the problem. Use a model of each solution to evaluate how variations in one or more design features, including size, shape, weight, or cost, may affect the function or effectiveness of the solution. *
	7.MS-ETS1-4	Generate and analyze data from iterative testing and modification of a proposed object, tool, or process to optimize the object, tool, or process for its intended purpose. *
	7.MS-ETS1-7(MA)	Construct a prototype of a solution to a given design problem. *
Techno-logical Systems	7.MS-ETS3-1(MA)	Explain the function of a communication system and the role of its components, including a source, encoder, transmitter, receiver, decoder, and storage.
	7.MS-ETS3-2(MA)	Compare the benefits and drawbacks of different communication systems. Clarification Statements: <ul style="list-style-type: none"> ◆ Examples of communications systems can include radio, television, print, and Internet. ◆ Examples of benefits and drawbacks can include speed of communication, distance or range, number of people reached, audio only vs. audio and visual, and one-way vs. two-way communication.
	7.MS-ETS3-3(MA)	Research and communicate information about how transportation systems are designed to move people and goods using a variety of vehicles and devices. Identify and describe subsystems of a transportation vehicle, including structural, propulsion, guidance, suspension, and control subsystems. Clarification Statements: <ul style="list-style-type: none"> ◆ Examples of design elements include vehicle shape to maximize cargo or passenger capacity, terminals, travel lanes, and communications/controls. ◆ Examples of vehicles can include a car, sailboat, and small airplane.

CONTENT Science and Technology/Engineering
DISCIPLINE Technology/Engineering

Grade Level: Grade 7

Core Idea	Learning Standards as written	
Techno-logical Systems (cont.)	7.MS-ETS3-4(MA)	<p>Show how the components of a structural system work together to serve a structural function. Provide examples of physical structures and relate their design to their intended use.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Examples of components of a structural system could include foundation, decking, wall, and roofing. ◆ Explanations of function should include identification of live vs. dead loads and forces of tension, torsion, compression, and shear. ◆ Examples of uses include carrying loads and forces across a span (such as a bridge), providing livable space (such as a house or office building), and providing specific environmental conditions (such as a greenhouse or cold storage).
	7.MS-ETS3-5(MA)	<p>Use the concept of systems engineering to model inputs, processes, outputs, and feedback among components of transportation, structural, or communication system.</p>

Grade Level: Grade 8

Core Idea	Learning Standards as written	
Materials, Tools, and Manufacturing	8.MS-ETS2-4(MA)	<p>Use informational text to illustrate that materials maintain their composition under various kinds of physical processing; however, some material properties may change if a process changes the particulate structure of a material.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Examples of physical processing can include cutting, forming, extruding, and sanding. ◆ Examples of changes in material properties can include a non-magnetic iron material becoming magnetic after hammering and a plastic material becoming rigid (less elastic) after heat treatment.
	8.MS-ETS2-5(MA)	<p>Present information that illustrates how a product can be created using basic processes in manufacturing systems, including forming, separating, conditioning, assembling, finishing, quality control, and safety. Compare the advantages and disadvantages of human vs. computer control of these processes.</p>

ENTRY POINTS to Technology/Engineering Standards in Grades 6–8

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Engineering Design	<p>1. Asking questions/defining problems</p> <ul style="list-style-type: none"> Ask questions about what would happen if a variable was changed in a test of a prototype related to a design problem Identify scientific (testable) and non-scientific (non-testable) questions about a solution to a design problem Use prior knowledge to describe design problems that can be solved Determine several criteria for success and constraints on materials, time, or cost, when defining a design problem Generate scientific questions about a design problem based on research and/or observations <p>2. Planning and carrying out investigations</p> <ul style="list-style-type: none"> Plan and/or conduct a test of a design solution to produce data to serve as evidence for the validity of the solution Select and use appropriate methods and/or tools for collecting data about a problem or a design solution Record observations and/or measurements to produce data to serve as evidence for a problem or a design solution Test two different models of the same proposed design solution to determine which better meets criteria for success. 	<p>3. Analyzing and interpreting data</p> <ul style="list-style-type: none"> Use observations and/or data (e.g., from prototype testing) to determine the criteria/constraints of a design problem such as size, shape, weight, or cost Use observations and/or data (e.g., from prototype testing) to determine the validity of a design solution such as size, shape, weight, or cost Represent data visually (e.g., decision matrix, bar graphs, pictographs, and/or pie charts) to reveal patterns about the successes and failures of a design solution Represent data visually (e.g., decision matrix, bar graphs, pictographs, and/or pie charts) to reveal patterns about the criteria/constraints of a design problem Analyze and interpret data to make sense of the successes and failures of a design solution Analyze and interpret data to make sense of the criteria/constraints of a design problem Compare and contrast the result of a design solution to the criteria/constraints of the design problem Use observations and/or data to evaluate and/or refine design solutions 	<p>5. Developing and using models</p> <ul style="list-style-type: none"> Develop, revise, and or use a model to show/explain a problem or design solution <p>6. Constructing explanations</p> <ul style="list-style-type: none"> Explain the criteria/constraints of a problem (e.g., potential impacts on people and the environment) Explain the elements of a design solution Explain the relationship between the criteria/constraints of a problem and a design solution Draw conclusions based on multiple pieces of evidence (e.g., from prototype testing) about the effectiveness of a design solution Generate and compare multiple solutions to a problem Use observations and data from investigations to design a solution to a problem <p>7. Engaging in argument from evidence</p> <ul style="list-style-type: none"> Use scientific evidence to support an argument about the solution that best fits a problem's criteria/constraints Compare and critique two arguments about the solution that best fits a problem's criteria/constraints Defend a claim about the merit of a design solution by citing relevant evidence (e.g. size, shape, weight, cost, potential impacts on people and the environment)

ENTRY POINTS to Technology/Engineering Standards in Grades 6–8

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Engineering Design (cont.)		4. Using mathematics and computational thinking <ul style="list-style-type: none"> Organize simple data sets to reveal patterns about a problem or a design solution Evaluate if qualitative or quantitative data is best to collect as evidence when defining a problem or testing a design solution Use computations (e.g., addition, subtraction, division, multiplication) to analyze data (e.g., size, shape, weight, cost) to establish evidence defining a problem or evaluating a design solution Use scale and proportion in diagrams (e.g., scale drawings) representing design solutions 	8. Obtaining, evaluating, and communicating information <ul style="list-style-type: none"> Research and present information about the criteria/constraints of a design problem or a design solution Communicate (orally, graphically, textually, and/or mathematically) scientific information or ideas about the criteria/constraints of a design problem or a design solution Combine scientific information from multiple sources to explain the criteria/constraints of a design problem or a design solution

Design Problem = a problem with an object tool or process based on observations and/or data

Design Solution = a proposed modification/improvement to an object tool or process, or a new object tool or process, that meets the needs of a design problem

ENTRY POINTS to Technology/Engineering Standards in Grades 6–8

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Materials, Tools, and Manufacturing	1. Asking questions/defining problems <ul style="list-style-type: none"> Ask questions about what would happen if a material (e.g., metals, plastics, wood, ceramic) was changed in a test of a prototype related to a design problem Identify scientific (testable) and non-scientific (non-testable) questions about the materials (e.g., metals, plastics, wood, ceramic) used in a design solution Use prior knowledge to describe design problems that can be solved using hand tools and/or power tools Use prior knowledge to describe design problems that can be solved using basic manufacturing processes (e.g., forming, separating, conditioning, assembling, finishing, quality control, safety) Determine several constraints of materials when defining a design problem Generate scientific questions based on research and/or observations about the human control vs. computer control of a manufacturing process (e.g., automated assembly line vs human built) 	3. Analyzing and interpreting data <ul style="list-style-type: none"> Use observations and/or data to determine the most appropriate tool (e.g., hand tool, power tool) for constructing a prototype Use observations and/or data (e.g., from prototype testing) to determine the validity of the use of a material (e.g., metals, plastics, wood, ceramic) in a design solution Represent data visually (e.g., bar graphs, pictographs, and/or pie charts) to reveal patterns about the successes and failures of a design solution constructed with different materials Represent data visually (e.g., bar graphs, pictographs, and/or pie charts) to reveal patterns about the criteria/constraints of a design problem related to the physical processing of materials Analyze and interpret data to make sense of the successes and failures of computer control of a process Compare and contrast the result of a design solution to the criteria/constraints of the design problem that requires the evaluation of materials Use observations and/or data to evaluate and/or refine design solutions using basic manufacturing processes (e.g., forming, separating, conditioning, assembling, finishing, quality control, safety) 	5. Developing and using models <ul style="list-style-type: none"> Develop, revise, and/or use a model (e.g., design sketch, prototype) to show/explain the materials used in a design solution and their properties Develop, revise, and/or use a model to show/explain how materials processing (e.g., cutting, forming, extruding, sanding) may or may not change the property of the material Develop, revise, and/or use a model to show/explain the basic manufacturing processes (e.g., forming, separating, conditioning, assembling, finishing, quality control, safety) for creating a product Develop, revise, and/or use a model to compare the advantages and disadvantages of human control vs. computer control of a process
	2. Planning and carrying out investigations <ul style="list-style-type: none"> Plan and/or conduct a test of a design solution using different types of materials (e.g., metals, plastics, wood, ceramic) to produce data to serve as evidence 		6. Constructing explanations <ul style="list-style-type: none"> Explain the constraints of using measuring tools, hand tools, fasteners, and/or power tools for defining a problem or constructing a solution Explain why a specific material was selected to accomplish a design task based on the material's properties (e.g., weight, strength, hardness, flexibility) Explain the elements of the manufacturing processes (e.g., forming, separating, conditioning, assembling, finishing, quality control, safety) for a design solution

Biological Evolution: Unity and Diversity	Pages 58–60	Pages 185, 195–198

Grade Level: High School

Core Idea	Learning Standards as written	
From Molecules to Organisms: Structures and Processes	HS-LS1-1	<p>Construct a model of transcription and translation to explain the roles of DNA and RNA that code for proteins that regulate and carry out essential functions of life.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">◆ Proteins that regulate and carry out essential functions of life include enzymes (which speed up chemical reactions), structural proteins (which provide structure and enable movement), and hormones and receptors (which send and receive signals).◆ The model should show the double-stranded structure of DNA, including genes as part of DNA's transcribed strand, with complementary bases on the nontranscribed strand.
	HS-LS1-2	<p>Develop and use a model to illustrate the key functions of animal body systems, including (a) food digestion, nutrient uptake, and transport through the body; (b) exchange of oxygen and carbon dioxide; (c) removal of wastes; and (d) regulation of body processes.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none">◆ Emphasis is on the primary function of the following body systems (and structures): digestive (mouth, stomach, small intestine [villi], large intestine, pancreas), respiratory (lungs [alveoli], diaphragm), circulatory (heart, veins, arteries, capillaries), excretory (kidneys, liver, skin), and nervous (neurons, brain, spinal cord).
	HS-LS1-3	<p>Provide evidence that homeostasis maintains internal body conditions through both body-wide feedback mechanisms and small-scale cellular processes.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none">◆ Feedback mechanisms include the promotion of a stimulus through positive feedback (e.g., injured tissues releasing chemicals in blood that activate platelets to facilitate blood clotting), and the inhibition of stimulus through negative feedback (e.g., insulin reducing high blood glucose to normal levels).◆ Cellular processes include (a) passive transport and active transport of materials across the cell membrane to maintain specific concentrations of water and other nutrients in the cell and (b) the role of lysosomes in recycling wastes, macromolecules, and cell parts into monomers.
	HS-LS1-4	<p>Construct an explanation using evidence for why the cell cycle is necessary for the growth, maintenance, and repair of multicellular organisms. Model the major events of the cell cycle, including (a) cell growth and DNA replication, (b) separation of chromosomes (mitosis), and (c) separation of cell contents.</p>

Grade Level: High School

Core Idea	Learning Standards as written	
From Molecules to Organisms: Structures and Processes (cont.)	HS-LS1-5	<p>Use a model to illustrate how photosynthesis uses light energy to transform water and carbon dioxide into oxygen and chemical energy stored in the bonds of sugars and other carbohydrates.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Emphasis is on illustrating inputs and outputs of matter and the transfer and transformation of energy in photosynthesis by plants and other photosynthesizing organisms. ◆ Examples of models could include diagrams, chemical equations, and conceptual models
	HS-LS1-6	<p>Construct an explanation based on evidence that organic molecules are primarily composed of six elements, where carbon, hydrogen, and oxygen atoms may combine with nitrogen, sulfur, and phosphorus to form monomers that can further combine to form large carbon-based macromolecules.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Monomers include amino acids, mono- and disaccharides, nucleotides, and fatty acids. ◆ Organic macromolecules include proteins, carbohydrates (polysaccharides), nucleic acids, and lipids.
	HS-LS1-7	<p>Use a model to illustrate that aerobic cellular respiration is a chemical process whereby the bonds of food molecules and oxygen molecules are broken and new bonds form, resulting in new compounds and a net transfer of energy.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Emphasis is on the conceptual understanding of the inputs and outputs of the process of aerobic cellular respiration. ◆ Examples of models could include diagrams, chemical equations, and conceptual models. ◆ The model should include the role of ATP for energy transfer in this process. ◆ Food molecules include sugars (carbohydrates), fats (lipids), and proteins.
Ecosystem: Interaction, Energy, and Dynamics	HS-LS2-1	<p>Analyze data sets to support explanations that biotic and abiotic factors affect ecosystem carrying capacity.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Examples of biotic factors could include relationships among individuals (e.g., feeding relationships, symbioses, competition) and disease. ◆ Examples of abiotic factors could include climate and weather conditions, natural disasters, and availability of resources. ◆ Example data sets can be derived from simulations or historical data.

Grade Level: High School

Core Idea	Learning Standards as written	
Ecosystem: Interaction, Energy, and Dynamics (cont.)	HS-LS2-2	<p>Use mathematical representations to support explanations that biotic and abiotic factors affect biodiversity, including genetic diversity within a population and species diversity within an ecosystem.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Examples of biotic factors could include relationships among individuals (feeding relationships, symbiosis, competition) and disease. ◆ Examples of abiotic factors could include climate and weather conditions, natural disasters, and availability of resources. ◆ Examples of mathematical representations include finding the average, determining trends, and using graphical comparisons of multiple sets of data.
	HS-LS2-4	<p>Use a mathematical model to describe the transfer of energy from one trophic level to another. Explain how the inefficiency of energy transfer between trophic levels affects the relative number of organisms that can be supported at each trophic level and necessitates a constant input of energy from sunlight or inorganic compounds from the environment.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none"> ◆ The model should illustrate the “10% rule” of energy transfer and show approximate amounts of available energy at each trophic level in an ecosystem (up to five trophic levels).
	HS-LS2-5	<p>Use a model that illustrates the roles of photosynthesis, cellular respiration, decomposition, and combustion to explain the cycling of carbon in its various forms among the biosphere, atmosphere, hydrosphere, and geosphere.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ The primary forms of carbon include carbon dioxide, hydrocarbons, waste (dead organic matter), and biomass (organic materials of living organisms). ◆ Examples of models could include simulations and mathematical models.
	HS-LS2-6	<p>Analyze data to show ecosystems tend to maintain relatively consistent numbers and types of organisms even when small changes in conditions occur but that extreme fluctuations in conditions may result in a new ecosystem. Construct an argument supported by evidence that ecosystems with greater biodiversity tend to have greater resistance to change and resilience.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none"> ◆ Examples of changes in ecosystem conditions could include modest biological or physical changes, such as moderate hunting or a seasonal flood; and extreme changes, such as volcanic eruption, fires, the decline or loss of a keystone species, climate changes, ocean acidification, or sea level rise.

Grade Level: High School

Core Idea	Learning Standards as written	
Ecosystem: Interaction, Energy, and Dynamics (cont.)	HS-LS2-7	Analyze direct and indirect effects of human activities on biodiversity and ecosystem health, specifically habitat fragmentation, introduction of non-native or invasive species, overharvesting, pollution, and climate change. Evaluate and refine a solution for reducing the impacts of human activities on biodiversity and ecosystem health. Clarification Statement: <ul style="list-style-type: none"> Examples of solutions can include captive breeding programs, habitat restoration, pollution mitigation, energy conservation, and ecotourism.
	[HS-LS2-3 has been merged with HS-LS2-4 and HS-LS2-5. HS-LS2-8 from NGSS is not included.]	
Heredity: Inheritance and Variation of Traits	HS-LS3-1	Develop and use a model to show how DNA in the form of chromosomes is passed from parents to offspring through the processes of meiosis and fertilization in sexual reproduction. Clarification Statement: <ul style="list-style-type: none"> The model should demonstrate that an individual's characteristics (phenotype) result, in part, from interactions among the various proteins expressed by one's genes (genotype).
	HS-LS3-2	Make and defend a claim based on evidence that genetic variations (alleles) may result from (a) new genetic combinations via the processes of crossing over and random segregation of chromosomes during meiosis, (b) mutations that occur during replication, and/or (c) mutations caused by environmental factors. Recognize that mutations that occur in gametes can be passed to offspring. Clarification Statement: <ul style="list-style-type: none"> Examples of evidence of genetic variation can include the work of McClintock in crossing over of maize chromosomes and the development of cancer due to DNA replication errors and UV ray exposure.
	HS-LS3-3	Apply concepts of probability to represent possible genotype and phenotype combinations in offspring caused by different types of Mendelian inheritance patterns. Clarification Statements: <ul style="list-style-type: none"> Representations can include Punnett squares, diagrams, pedigree charts, and simulations. Inheritance patterns include dominant-recessive, codominance, incomplete dominance, and sex-linked.

Grade Level: High School

Core Idea	Learning Standards as written	
Heredity: Inheritance and Variation of Traits (cont.)	HS-LS3-4(MA)	<p>Use scientific information to illustrate that many traits of individuals, and the presence of specific alleles in a population, are due to interactions of genetic factors and environmental factors.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Examples of genetic factors include the presence of multiple alleles for one gene and multiple genes influencing a trait. ◆ An example of the role of the environment in expressed traits in an individual can include the likelihood of developing inherited diseases (e.g., heart disease, cancer) in relation to exposure to environmental toxins and lifestyle; an example in populations can include the maintenance of the allele for sickle-cell anemia in high frequency in malaria-affected regions because it confers partial resistance to malaria.
	HS-LS4-1	<p>Communicate scientific information that common ancestry and biological evolution are supported by multiple lines of empirical evidence, including molecular, anatomical, and developmental similarities inherited from a common ancestor (homologies), seen through fossils and laboratory and field observations.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none"> ◆ Examples of evidence can include the work of Margulis on endosymbiosis, examination of genomes, and analyses of vestigial or skeletal structures.
Biological Evolution: Unity and Diversity	HS-LS4-2	<p>Construct an explanation based on evidence that Darwin's theory of evolution by natural selection occurs in a population when the following conditions are met: (a) more offspring are produced than can be supported by the environment, (b) there is heritable variation among individuals, and (c) some of these variations lead to differential fitness among individuals as some individuals are better able to compete for limited resources than others.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none"> ◆ Emphasis is on the overall result of an increase in the proportion of those individuals with advantageous heritable traits that are better able to survive and reproduce in the environment.
	HS-LS4-4	<p>Research and communicate information about key features of viruses and bacteria to explain their ability to adapt and reproduce in a wide variety of environments.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none"> ◆ Key features include high rate of mutations and the speed of reproduction which produces many generations with high variability in a short time, allowing for rapid adaptation.
	HS-LS4-5	<p>Evaluate models that demonstrate how changes in an environment may result in the evolution of a population of a given species, the emergence of new species over generations, or the extinction of other species due to the processes of genetic drift, gene flow, mutation, and natural selection.</p>
	[HS-LS4-3 from NGSS is merged with HS-LS4-2. HS-LS4-6 from NGSS is not included.]

Matter and Its Interactions	HS-PS1-8	<p>Develop a model to illustrate the energy released or absorbed during the processes of fission, fusion, and radioactive decay.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Examples of models include simple qualitative models, such as pictures or diagrams. ◆ Types of radioactive decay include alpha, beta, and gamma.
	HS-PS2-1	<p>Analyze data to support the claim that Newton's second law of motion is a mathematical model describing change in motion (the acceleration) of objects when acted on by a net force.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Examples of data could include tables or graphs of position or velocity as a function of time for objects subject to a net unbalanced force, such as a falling object, an object rolling down a ramp, and a moving object being pulled by a constant force. ◆ Forces can include contact forces, including friction, and forces acting at a distance, such as gravity and magnetic forces.
Motion and Stability: Forces and Interactions	HS-PS2-2	<p>Use mathematical representations to show that the total momentum of a system of interacting objects is conserved when there is no net force on the system.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none"> ◆ Emphasis is on the qualitative meaning of the conservation of momentum and the quantitative understanding of the conservation of linear momentum in interactions involving elastic and inelastic collisions between two objects in one dimension.
	HS-PS2-3	<p>Apply scientific principles of motion and momentum to design, evaluate, and refine a device that minimizes the force on a macroscopic object during a collision.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none"> ◆ Both qualitative evaluations and algebraic manipulations may be used.
	HS-PS2-4	<p>Use mathematical representations of Newton's law of gravitation and Coulomb's law to both qualitatively and quantitatively describe and predict the effects of gravitational and electrostatic forces between objects.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none"> ◆ Emphasis is on the relative changes when distance, mass or charge, or both are changed.

Grade Level: High School

Core Idea	Learning Standards as written	
Motion and Stability: Forces and Interactions (cont.)	HS-PS2-5	Provide evidence that an electric current can produce a magnetic field and that a changing magnetic field can produce an electric current. Clarification Statement: <ul style="list-style-type: none"> Examples of evidence can include movement of a magnetic compass when placed in the vicinity of a current-carrying wire, and a magnet passing through a coil that turns on the light of a Faraday flashlight.
	HS-PS2-9(MA)	Evaluate simple series and parallel circuits to predict changes to voltage, current, or resistance when simple changes are made to a circuit. Clarification Statements: <ul style="list-style-type: none"> Predictions of changes can be represented numerically, graphically, or algebraically using Ohm's law. Simple changes to a circuit may include adding a component, changing the resistance of a load, and adding a parallel path, in circuits with batteries and common loads. Simple circuits can be represented in schematic diagrams.
	HS-PS2-10(MA)	Use free-body force diagrams, algebraic expressions, and Newton's laws of motion to predict changes to velocity and acceleration for an object moving in one dimension in various situations. Clarification Statements: <ul style="list-style-type: none"> Predictions of changes in motion can be made numerically, graphically, and algebraically using basic equations for velocity, constant acceleration, and Newton's first and second laws. Forces can include contact forces, including friction, and forces acting at a distance, such as gravity and magnetic forces.
	[HS-PS2-6, HS-PS2-7(MA), and HS-PS2-8(MA) are found in chemistry.]	
Energy	HS-PS3-1	Use algebraic expressions and the principle of energy conservation to calculate the change in energy of one component of a system when the change in energy of the other component(s) of the system, as well as the total energy of the system including any energy entering or leaving the system, is known. Identify any transformations from one form of energy to another, including thermal, kinetic, gravitational, magnetic, or electrical energy, in the system. Clarification Statement: <ul style="list-style-type: none"> Systems should be limited to two or three components and to thermal energy; kinetic energy; or the energies in gravitational, magnetic, or electric fields.

Grade Level: High School

Core Idea	Learning Standards as written	
Energy (cont.)	HS-PS3-2	<p>Develop and use a model to illustrate that energy at the macroscopic scale can be accounted for as either motions of particles and objects or energy stored in fields.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Examples of phenomena at the macroscopic scale could include evaporation and condensation, the conversion of kinetic energy to thermal energy, the gravitational potential energy stored due to position of an object above the earth, and the stored energy (electrical potential) of a charged object's position within an electrical field. ◆ Examples of models could include diagrams, drawings, descriptions, and computer simulations.
	HS-PS3-3	<p>Design and evaluate a device that works within given constraints to convert one form of energy into another form of energy.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Emphasis is on both qualitative and quantitative evaluations of devices. ◆ Examples of devices could include Rube Goldberg devices, wind turbines, solar cells, solar ovens, and generators. ◆ Examples of constraints could include use of renewable energy forms and efficiency.
	HS-PS3-4a	<p>Provide evidence that when two objects of different temperature are in thermal contact within a closed system, the transfer of thermal energy from higher-temperature objects to lower-temperature objects results in thermal equilibrium, or a more uniform energy distribution among the objects and that temperature changes necessary to achieve thermal equilibrium depend on the specific heat values of the two substances.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none"> ◆ Energy changes should be described both quantitatively in a single phase ($Q = mc\Delta T$) and conceptually either in a single phase or during a phase change.
	HS-PS3-5	<p>Develop and use a model of magnetic or electric fields to illustrate the forces and changes in energy between two magnetically or electrically charged objects changing relative position in a magnetic or electric field, respectively.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Emphasis is on the change in force and energy as objects move relative to each other. ◆ Examples of models could include drawings, diagrams, and texts, such as drawings of what happens when two charges of opposite polarity are near each other.
	[HS-PS3-4b is found in chemistry.]	

Grade Level: High School

Core Idea	Learning Standards as written	
Waves and Their Applications in Technologies for Information Transfer	HS-PS4-1	<p>Use mathematical representations to support a claim regarding relationships among the frequency, wavelength, and speed of waves traveling within various media. Recognize that electromagnetic waves can travel through empty space (without a medium) as compared to mechanical waves that require a medium.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Emphasis is on relationships when waves travel within a medium, and comparisons when a wave travels in different media. ◆ Examples of situations to consider could include electromagnetic radiation traveling in a vacuum and glass, sound waves traveling through air and water, and seismic waves traveling through the Earth. ◆ Relationships include $v = \lambda f$, $T = 1/f$, and the qualitative comparison of the speed of a transverse (including electromagnetic) or longitudinal mechanical wave in a solid, liquid, gas, or vacuum.
	HS-PS3-3	<p>Evaluate the claims, evidence, and reasoning behind the idea that electromagnetic radiation can be described by either a wave model or a particle model, and that for some situations involving resonance, interference, diffraction, refraction, or the photoelectric effect, one model is more useful than the other.</p> <p>Clarification Statement:</p> <ul style="list-style-type: none"> ◆ Emphasis is on qualitative reasoning and comparisons of the two models.
	HS-PS3-5	<p>Communicate technical information about how some technological devices use the principles of wave behavior and wave interactions with matter to transmit and capture information and energy.</p> <p>Clarification Statements:</p> <ul style="list-style-type: none"> ◆ Emphasis is on qualitative information and descriptions. ◆ Examples of technological devices could include solar cells capturing light and converting it to electricity, medical imaging, and communications technology. ◆ Examples of principles of wave behavior include resonance, photoelectric effect, and constructive and destructive interference.
	[HS-PS4-2 and HS-PS4-4 from NGSS are not included.]	

ENTRY POINTS to Introductory Physics Standards in High School

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Matter and Its Interactions	[Standards for this core idea at High School level are aligned with Chemistry. See entry points for earlier grades in this core idea.]		
Motion and Stability: Forces and Interactions	<p>1. Asking questions/defining problems</p> <ul style="list-style-type: none"> Generate a scientific question that is testable about the motion of an object, based on observations, models, and/or results from an investigation Generate a scientific question that is testable about how the mass of an object affects its rate of acceleration when the same net force is acting on it, based on observations, models, and/or results from an investigation of the object Determine criteria and constraints to define a design problem about minimizing the force of an impact in a collision Evaluate a scientific question to determine if it is testable and/or relevant to momentum conservation in a collision Generate a scientific question that is testable about the forces between two charged objects, based on observations, models, and/or results from an investigation Generate a scientific question that is testable about how a magnetic field can be produced by an electric current, based on observations, models, and/or results from an investigation Determine criteria and constraints of a design problem that involves electrical or magnetic fields 	<p>3. Analyzing and interpreting data</p> <ul style="list-style-type: none"> Analyze data from a table or graph of mass and net force to determine the conditions under which an object has the greatest acceleration Create an appropriate visual representation of data (e.g., line graph) to show the position, speed, velocity, and/or acceleration of an object Analyze data from a position vs. time graph to determine the position and velocity of an object during a time interval in which the object has a constant velocity Analyze data from a velocity vs. time graph to determine the velocity and acceleration of an object during a time interval in which the object has a constant acceleration Analyze data from a table or graph, including the velocity of two objects with the same mass before and after a collision, to determine if momentum was conserved Analyze data from a table or graph to compare the current through resistors that are in series and/or the current through resistors that are in parallel Analyze data from a table or graph to compare the voltage drop across resistors that are in parallel and/or the voltage drop across resistors that are in series 	<p>5. Developing and using models</p> <ul style="list-style-type: none"> Construct a free-body force diagram (model) of the forces acting on an object Evaluate free-body force diagrams (models) to determine which object has the greatest or least net force acting on it Construct a model to explain how momentum is conserved when two objects collide and stick together Use a model (e.g., computer simulation) of two charged objects to determine how changing the distance between the objects affects the magnitude of the forces between them Use a model of a gravitational field or an electrical field to identify the direction of the force on a test object in the field (e.g., very small mass, very small charge) Modify a model of a simple circuit by adding resistors in series and/or in parallel Construct a circuit diagram (model) using proper schematic symbols <p>6. Constructing explanations</p> <ul style="list-style-type: none"> Construct an explanation of the relationship between an object with a constant velocity and the forces acting on that object, based on a variety of sources (e.g., model, research, investigation, simulation)

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Motion and Stability: Forces and Interactions (cont.)	<p>2. Planning and carrying out investigations</p> <ul style="list-style-type: none"> Plan and/or follow the steps of an investigation to collect data about the position of an object at specific times and/or intervals Select and/or create the appropriate table or organizer to collect data from an investigation about motion (e.g., including change in position, velocity, acceleration, time) Plan and/or follow the steps of an investigation to collect data about the motion of objects with different masses or net forces acting upon them Plan and/or conduct an investigation to measure the velocities of two colliding objects that stick together after impact Plan and/or follow the steps of an investigation to collect data about the factors that influence the relative strength of a magnetic field produced by a current carrying wire. Select and use appropriate tools to conduct an investigation about the electric current produced by a changing magnetic field Plan and/or follow the steps of an investigation to collect data on the voltage drop across resistors in series and in parallel Select and/or create an appropriate table or organizer to collect data from an investigation about the voltage drop across, current through, and resistance of resistors that are in series or parallel 	<p>4. Using mathematics and computational thinking</p> <ul style="list-style-type: none"> Use the formula $v_f = v_i + a\Delta t$ or $\Delta x = v_i\Delta t + \frac{1}{2}at^2$ to solve problems involving constant acceleration Use the formula $F_{net} = ma$ to solve for the acceleration, net force, or mass of an object Use the formula $F_g = mg$ to solve for the mass of an object or force of gravity acting on the object Apply mathematical concepts and/or processes (proportions, and/or the formula $p = m\Delta v$) to determine the velocity of an object after a collision Apply mathematical concepts and/or processes (proportions, and/or the formula $F\Delta t = \Delta p$) to determine the change in momentum caused by a force Use the formula $F_g = G \frac{m_1 m_2}{d^2}$ to solve for the gravitational forces between two objects Use the formula $V = IR$ (Ohm's law) to solve for the voltage drop across, current through, or resistance of a resistor in a circuit Apply mathematical concepts and/or processes (e.g., basic operations) to determine the total resistance of multiple resistors in a series circuit 	<p>6. Constructing explanations (cont.)</p> <ul style="list-style-type: none"> Construct an explanation of the motion of an object based on a graph (e.g., position vs. time, velocity vs. time, acceleration vs. time, net force vs. time) Construct an explanation of the relationship between mass and inertia based on a variety of sources (e.g., model, research, simulation) Construct an explanation about how the gravitational forces that two objects exert on each other compare in magnitude and direction Apply scientific ideas or principles to design and construct a prototype of a circuit that meets given criteria Apply scientific ideas or principles to design and construct a prototype that minimizes the force on an object during a collision <p>7. Engaging in argument from evidence</p> <ul style="list-style-type: none"> Use scientific evidence and observations to construct an argument about the effectiveness of a safety device used in collisions (e.g., airbags, seatbelts, crushable bumpers, parachutes) Make and defend a claim based on scientific evidence about a design solution that will maximize the acceleration of an object Use scientific evidence to construct an argument about whether series or parallel circuits should be used in homes

ENTRY POINTS to Introductory Physics Standards in High School

Core Idea	Investigations and Questioning	Mathematics and Data	Evidence, Reasoning, and Modeling
Motion and Stability: Forces and Interactions (cont.)			8. Obtaining, evaluating, and communicating information <ul style="list-style-type: none"> ♦ Research, record, and/or present information showing how an object with the same mass can have different weights depending on the gravitational field ♦ Communicate scientific information or ideas (orally, graphically, textually, and/or mathematically) about how a technology/device uses magnetic fields and electrical currents to function (e.g., speaker, motor, fan, generator) ♦ Research, record, and/or present information comparing the forces between two masses and the forces between two charged objects ♦ Evaluate the validity of claims comparing series and parallel circuits
Energy	1. Asking questions/defining problems <ul style="list-style-type: none"> ♦ Generate a scientific question that is testable about how adding heat to a substance affects the temperature of the substance, using available resources ♦ Generate a scientific question that is testable about what factors affect the gravitational potential energy of an object, based on observations, models, simulations and/or results from an investigation ♦ Determine criteria and constraints to define a design problem that can be solved by designing a device that converts one form of energy to another 	3. Analyzing and interpreting data <ul style="list-style-type: none"> ♦ Analyze data from a table or graph that includes the heights and masses of different objects to order the objects by the amount of gravitational potential energy of each object ♦ Create an appropriate visual representation of data (e.g., line graph, bar graph, table) to compare the efficiency of multiple devices ♦ Create appropriate visual representation of data (e.g., line graph, bar graph, table) to compare the kinetic energy, gravitational potential energy, and mechanical energy of an object in different locations as it moves along a track 	5. Developing and using models <ul style="list-style-type: none"> ♦ Construct a model of the energy conversions within a device, including that some of the total energy put into the device is converted to thermal energy and sound energy ♦ Use a model of the particle motion and spatial arrangement in a substance to determine if the substance is a solid, liquid, or gas ♦ Evaluate a model of the electric field around 1- or 2-point charges to rank several locations in order of increasing field strength. ♦ Construct or revise models of particles in different phases
